2. Contract specifications

For the detailed contract specifications please refer to Eurex circular 007/18.

Underlying instrument	Bloomberg Commodity Indexes (standard contracts)	Bloomberg Commodity Indexes (XL contracts)
Description of underlying	<p>The Bloomberg commodity index family measures the performance of investments of up to 22 commodities. For index calculation, prices of commodity futures of different exchanges will be considered. These will be rolled pursuant to a specific method. The index is developed so that it can be replicated and is not dominated by individual commodities or sectors.</p> <p>The index rules and regulations and the current composition and weighting can be found on the Bloomberg website under https://www.bloombergindices.com/bloomberg-commodity-index-family/</p>	
Contract value	USD 250 per index point	USD 1,000 per index point
Settlement	Cash settlement, due on the first exchange trading day after the final settlement day	
Price determination	In points, with two decimal places	
Minimum price change	0.01 points; corresponds to a value of USD 2.50	0.01 points; corresponds to a value of USD 10.00

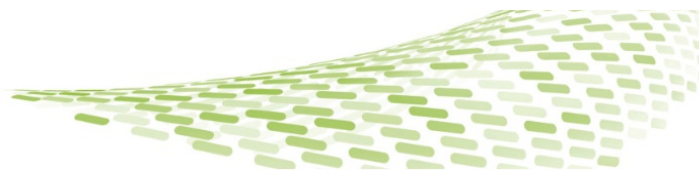

Contract months	The next three months, the successive three quarter months (March, June, September, December), the successive four semi-annual months (June, December) and the successive two annual contract months (December)	The next three quarter months (March, June, September and December)
Last trading day/final settlement day	<p>The last trading day of Commodity Index Futures contracts shall be the third Friday of the respective month, provided this is an exchange day, otherwise, it shall be the exchange day preceding this day.</p> <p>The final settlement day of Commodity Index Futures contracts shall be five trading days after the last trading day, as long as this day is still within the same calendar month. If not, the final settlement day is the last trading day in the calendar month, in which the contract expires.</p>	
Final settlement price	<p>Decisive for the Bloomberg commodity index futures contracts is the index close on the last trading day, calculated by the index provider (Bloomberg). The index close is calculated based on the single daily settlement prices of the commodity futures which are summarised in the index.</p> <p>If the determination of the final settlement price is not possible pursuant to paragraph (1), because no price determination in one or several components of the index can take place due to a trading suspension, a public holiday or due to other reasons, the next possible settlement price on one of the trading days prior to the final settlement day will be taken as a basis for these components.</p> <p>The final settlement price is rounded to three decimal places.</p>
