Re: CFTC Regulation 40.2(a) Certification. Initial Listing of Micro Crude Oil Option and Micro Crude Oil Weekly Option Contracts. NYMEX Submission No. 22-137 (3 of 6)

Dear Mr. Kirkpatrick:

New York Mercantile Exchange, Inc. ("NYMEX" or "Exchange") is certifying to the Commodity Futures Trading Commission ("CFTC" or "Commission") the initial listing of Micro Crude Oil Option and Micro Crude Oil Weekly Option contracts (the "Contracts") for trading on the CME Globex electronic trading platform ("CME Globex") and for submission for clearing via CME ClearPort, effective Sunday, June 5, 2022 for trade date Monday, June 6, 2022, as more specifically described below.

Contract Title	Micro WTI Crude Oil Option	Micro WTI Crude Oil Weekly Option
Rulebook Chapter	306	307
Commodity Code	МСО	MW1-MW5
Underlying Futures Contract Title / Commodity Code	Micro WTI Crude	e Oil Futures / MCL
Listing Schedule	Monthly contracts listed for 12 consecutive months.	Weekly contracts listed for 2 weeks. No weekly contract will be listed if the expiration is the same day as the monthly option expiration.
Initial Listing Schedule	July 2022 – June 2023	June 2022 - Week 2, June 2022 - Week 3
Strike Price Listing Schedule	Minimum 100 strikes at \$0.25 per barrel strike increment above and below the at-the-money strike then 10 strikes at \$2.50 per barrel strike increment on the nearest \$2.50 interval above and below the highest and lowest \$0.25 per barrel increment strikes then 10 strikes at \$5.00 per barrel strike increment on the nearest \$5.00 interval above and below the highest and lowest \$2.50 per barrel increment strikes plus dynamic strikes at \$0.25 per barrel strike increment.	Minimum 20 strikes at \$0.25 per barrel strike increment above and below the at-the-money strike then 10 strikes at \$0.50 per barrel strike increment on the nearest 0.50 interval above and below the highest and lowest \$0.25 per barrel increment strikes then 10 strikes at \$2.50 per barrel strike increment on the nearest 2.50 interval above and below the highest and lowest \$0.50 per barrel increment strikes plus dynamic strikes at \$0.25 per barrel strike increment.

300 Vesey Street New York, NY 10282 T 212 299 2200 F 212 301 4645 christopher.bowen@cmegroup.com cmegroup.com

Termination of Trading	Trading terminates 7 business days before the 26th calendar day of the month prior to the contract month.	Trading terminates on Friday of the contract week. If Friday is not a business day, trading terminates on the prior business day.				
Contract Size	100	barrels				
Price Quotation	U.S. dollars and	d cents per barrel				
Settlement Method	Fina	ancial				
Options Exercise Style	Euro	European				
Minimum Price Fluctuation	\$0.01 per barrel					
Value per Tick	\$1.00					
CME Globex Match Algorithm	First-In, First-Out (FIFO)					
Block Trade Minimum Threshold	100 contracts - subject to a 15-minute reporting window					
Trading and Clearing Hours	CME Globex Pre-open: Sunday 4:00 p.m 5:00 p.m. Central Time/CT Monday - Thursday 4:45 p.m 5:00 p.m. CT CME Globex Open: Sunday 5:00 p.m Friday 4:00 p.m. CT with a daily maintenance period from 4:00 p.m 5:00 p.m. CT CME ClearPort: Sunday 5:00 p.m Friday 4:00 p.m. CT with no reporting Monday - Thursday from 4:00 p.m 5:00 p.m. CT					

The new financially settled Micro WTI Crude Oil weekly and monthly option contracts are referenced contracts that expire prior to the spot period of their underlying core referenced futures contract (Commodity Code: CL; Rulebook Chapter 200). As such, spot month position limits are not applicable for the Contracts.

The Exchange reviewed the designated contracts market core principles ("Core Principles") as set forth in the Commodity Exchange Act ("CEA" or "Act") and identified that the Contracts may have some bearing on the following Core Principles:

- Compliance with Rules: Trading in the Contracts will be subject to the rules in Rulebook Chapter 4 which includes prohibitions against fraudulent, noncompetitive, unfair and abusive practices. Additionally, trading in the Contracts will also be subject to the full panoply of trade practice rules, the majority of which are contained in Chapter 5 and Chapter 8 of the Rulebook. As with all products listed for trading on one of CME Group's designated contract markets, activity in the new product will be subject to extensive monitoring and surveillance by CME Group's Market Regulation Department. The Market Regulation Department has the authority to exercise its investigatory and enforcement power where potential rule violations are identified.
- <u>Contract Not Readily Subject to Manipulation</u>: The Contracts are not readily susceptible to manipulation and are based on the deep liquidity of the underlying futures contracts.
- Prevention of Market Disruption: Trading in the Contracts will be subject to the Rules of NYMEX which include prohibitions on manipulation, price distortion and disruptions of the delivery or cash-settlement process. As with all products listed for trading on one of CME Group's designated contract markets, activity in the new products will be subject to extensive monitoring and surveillance by CME Group's Market Regulation Department.
- **<u>Position Limitations or Accountability</u>**: The speculative position limits for the Contracts as demonstrated in this submission are consistent with the Commission's guidance.

300 Vesey Street New York, NY 10282 T 212 299 2200 F 212 301 4645 christopher.bowen@cmegroup.com cmegroup.com

- <u>Availability of General Information</u>: The Exchange will publish on its website information regarding contract specifications, terms and conditions, as well as daily trading volume, open interest and price information for the Contracts.
- <u>Daily Publication of Trading Information</u>: The Exchange will publish information contract trading volumes, open interest levels, and price information daily on its website and through quote vendors for the Contracts.
- <u>Execution of Transactions</u>: The Contracts will be listed for trading on the CME Globex electronic trading and for clearing through CME ClearPort. The CME Globex trading venue provides for competitive and open execution of transactions. CME Globex affords the benefits of reliability and global connectivity.
- <u>Trade Information</u>: All required trade information for the Contracts will be included in the audit trail and is sufficient for the Market Regulation Department to monitor for market abuse.
- <u>Financial Integrity of Contract</u>: The Contracts will be cleared by the CME Clearing House which is a registered derivatives clearing organization with the Commission and is subject to all Commission regulations related thereto.
- <u>Protection of Market Participants</u>: NYMEX Rulebook Chapters 4 and 5 contain multiple prohibitions precluding intermediaries from disadvantaging their customers. These rules apply to trading on all of the Exchange's competitive trading venues and will be applicable to transactions in these Contracts.
- <u>Disciplinary Procedures</u>: Chapter 4 of the Rulebook contains provisions that allow the Exchange to discipline, suspend or expel members or market participants that violate the rules. Trading in these Contracts will be subject to Chapter 4, and the Market Regulation Department has the authority to exercise its enforcement power in the event rule violations in these Contracts are identified.
- **Dispute Resolution:** Disputes with respect to trading in the Contracts will be subject to the arbitration provisions set forth in Chapter 6 of the Rulebook. The rules in Chapter 6 allow all nonmembers to submit a claim for financial losses resulting from transactions on the Exchange to arbitration. A member named as a respondent in a claim submitted by a nonmember is required to participate in the arbitration pursuant to the rules in Chapter 6. Additionally, the Exchange requires that members resolve all disputes concerning transactions on the Exchange via arbitration.

Pursuant to Section 5c(c) of the Act and CFTC Regulation 40.2(a), the Exchange hereby certifies that listing the Contracts complies with the Act, including regulations under the Act. There were no substantive opposing views to the proposal.

The Exchange certifies that this submission has been concurrently posted on the CME Group website at http://www.cmegroup.com/market-regulation/rule-filings.html.

Should you have any questions concerning the above, please contact the undersigned at (212) 299-2200 or via e-mail at <u>CMEGSubmissionInquiry@cmegroup.com</u>.

Sincerely,

/s/ Christopher Bowen Managing Director and Chief Regulatory Counsel

Exhibit A NYMEX Rulebook Chapter 306 Micro WTI Crude Oil Option

306100. SCOPE OF CHAPTER

This chapter is limited in application to put and call options on the Micro WTI Crude Oil (MCL) Futures contract. In addition to the rules of this chapter, transactions in the Micro WTI Crude Oil Option contract shall be subject to the general rules of the Exchange insofar as applicable.

306101. OPTION CHARACTERISTICS

The number of contract months open for trading at a given time shall be determined by the Exchange. **306101.A. Trading Schedule**

The hours of trading for this contract shall be determined by the Exchange.

306101.B. Trading Units

On expiration of a call option, the value will be the settlement price of the first nearby Micro WTI Crude Oil Futures contract less the strike price, or zero, whichever is greater, multiplied by 100. On expiration of a put option, the value will be the strike price less the settlement price of the first nearby Micro WTI Crude Oil Futures contract, or zero, whichever is greater, multiplied by 100.

306101.C. Price Increments

Prices shall be quoted in dollars and cents per barrel and prices shall be in multiples of \$0.01 per barrel. The minimum price increment will be \$0.01.

306101D. Position Limits, Exemptions, Position Accountability and Reportable Levels

The applicable position limits and/or accountability levels, in addition to the reportable levels, are set forth in the Position Limit, Position Accountability and Reportable Level Table in the Interpretations & Special Notices Section of Chapter 5.

A Person seeking an exemption from position limits for bona fide commercial purposes shall apply to the Market Regulation Department on forms provided by the Exchange, and the Market Regulation Department may grant qualified exemptions in its sole discretion.

Refer to Rule 559 for requirements concerning the aggregation of positions and allowable exemptions from the specified position limits.

306101.E. Termination of Trading

A Micro WTI Crude Oil Option shall expire at the close of trading on the second business day immediately preceding the expiration of the underlying Micro WTI Crude Oil Futures (MCL) contract. **306101.F. Type of Option**

The option is a European-style option cash settled on expiration day.

306102. EXERCISE PRICES AND CHARACTERISTICS

Transactions shall be conducted for option contracts as set forth in Rule 300.20.

306103. SPECIAL PRICE FLUCTUATION LIMITS

At the commencement of each trading day, the contract shall be subject to special fluctuation limits as set forth in Rule 589 and in the Special Price Fluctuation Limits and Daily Price Limits Table in the Interpretations & Special Notices Section of Chapter 5.

Chapter 307 Micro WTI Crude Oil Weekly Option

307100. SCOPE OF CHAPTER

This chapter is limited in application to weekly put and call options on the Micro WTI Crude Oil (MCL) Futures contract. In addition to the rules of this chapter, transactions in the Micro WTI Crude Oil Weekly Option contract shall be subject to the general rules of the Exchange insofar as applicable.

307101. OPTION CHARACTERISTICS

The number of weeks open for trading at a given time shall be determined by the Exchange.

307101.A. Trading Schedule

The hours of trading for this contract shall be determined by the Exchange.

307101.B. Trading Units

On expiration of a call option, the value will be the settlement price of the first nearby Micro WTI Crude Oil Futures Contract less the strike price, or zero, whichever is greater, multiplied by 100. On expiration of a put option, the value will be the strike price less the settlement price of the first nearby Micro WTI Crude Oil Futures contract, or zero, whichever is greater, multiplied by 100.

307101.C. Price Increments

Prices shall be quoted in dollars and cents per barrel and prices shall be in multiples of \$0.01 per barrel. The minimum price increment will be \$0.01.

307101D. Position Limits, Exemptions, Position Accountability and Reportable Levels

The applicable position limits and/or accountability levels, in addition to the reportable levels, are set forth in the Position Limit, Position Accountability and Reportable Level Table in the Interpretations & Special Notices Section of Chapter 5.

A Person seeking an exemption from position limits for bona fide commercial purposes shall apply to the Market Regulation Department on forms provided by the Exchange, and the Market Regulation Department may grant qualified exemptions in its sole discretion.

Refer to Rule 559 for requirements concerning the aggregation of positions and allowable exemptions from the specified position limits.

307101.E. Termination of Trading

Options will expire at the close of trading on a Friday schedule. If such Friday falls on the expiration of a Micro WTI Crude Oil monthly option, the weekly option shall not be listed. For the first (1st) weekly option of the month, if the first Friday of the listing is a scheduled Exchange holiday, the Micro WTI Crude Oil Weekly Option shall terminate on the first Business Day immediately preceding the Friday.

For the second (2nd) weekly option of the month, if the second Friday of the listing is a scheduled Exchange holiday, the Micro WTI Crude Oil Weekly Option shall terminate on the first Business Day immediately preceding the Friday.

For the third (3rd) weekly option of the listing, if the third Friday of the listing is a scheduled Exchange holiday, the Micro WTI Crude Oil Weekly Option shall terminate on the first Business Day immediately preceding the Friday.

For the fourth (4th) weekly option of the listing, if the fourth Friday of the listing is a scheduled Exchange holiday, the Micro WTI Crude Oil Weekly Option shall terminate on the first Business Day immediately preceding the Friday.

For the fifth (5th) weekly option of the listing, if the fifth Friday of the listing is a scheduled Exchange holiday, the Micro WTI Crude Oil Weekly Option shall terminate on the first Business Day immediately preceding the Friday.

307101.F. Type of Option

The option is a European-style option cash settled on expiration day.

307102. EXERCISE PRICES AND CHARACTERISTICS

Transactions shall be conducted for option contracts as set forth in Rule 300.20.

307103. SPECIAL PRICE FLUCTUATION LIMITS

At the commencement of each trading day, the contract shall be subject to special fluctuation limits as set forth in Rule 589 and in the Special Price Fluctuation Limits and Daily Price Limits Table in the Interpretations & Special Notices Section of Chapter 5.

Exhibit G Cash Market Overview and Analysis of Deliverable Supply

New York Mercantile Exchange, Inc. ("NYMEX" or "Exchange") is certifying to the Commodity Futures Trading Commission ("CFTC" or "Commission") the listing of the Micro WTI Crude Oil Options and Micro WTI Crude Oil Weekly Options (the "Contracts") effective on trade date June 2, 2022. The Contracts are options on the Micro WTI Crude Oil Futures contract (Rulebook Chapter: 309; Commodity Code: MCL), a 100-barrel size financially settled look-alike contract based on the settlement prices of the Light Sweet Crude Oil Futures contract (Rulebook Chapter 200; Commodity Code: CL). In estimating deliverable supply for the underlying Light Sweet Crude Oil Futures, the Exchange relied on long-standing precedent, which provides that the key component in estimating deliverable supply is the portion of typical production and supply stocks that could reasonably be considered to be readily available for delivery.

Appendix C to part 38 of the Commission's regulations defines deliverable supply as "the quantity of the commodity meeting the contract's delivery specifications that can reasonably be expected to be readily available to short traders and saleable by long traders at its market value in normal cash marketing channels at the derivative contract's delivery points during the specified delivery period, barring abnormal movement in interstate commerce."

I. Methodology and Data Sources

The Exchange considered three components in evaluating deliverable supply estimates of the Domestic Light Sweet Common Stream Crude Oil for the Cushing, Oklahoma delivery location of the Light Sweet Crude Oil Futures contract:

- (1) Crude Oil Production;
- (2) Crude Oil Flows to the delivery area; and
- (3) Crude Oil Storage in the delivery area.

A. Crude Oil Production

While crude oil production information is, in part, available from other sources, particularly at the state level from energy or tax revenue authorities, the Exchange determined to use production information collected by the U.S. Department of Energy ("DOE") Energy Information Administration ("EIA"). Specifically, the Exchange has chosen to rely on the EIA production data because it constitutes a single source, employing common standards, across all states. The EIA data are highly regarded but they do not provide sufficient breakdown on the quality characteristics of the oil production to determine the subset of total production that would qualify as Domestic Light Sweet under the terms of the futures contract.

B. Crude Oil Flows to the Cushing Delivery Area

To determine the flows of Domestic Light Sweet crude oil into the delivery area, NYMEX consulted with industry executives and professionals from pipeline and storage terminal operators in Cushing as well as other major industry participants. It is noteworthy that the estimates provided here are materially less than the production that can readily access the delivery mechanism and which *could* be delivered due to the fact that the sources we used were specifically knowledgeable about *actual* Cushing deliveries. Thus, the information provided is not what *could be* delivered — the standard which is in accordance with Commission's policy and precedent — but what actually *is* delivered. The Exchange believes that the Cushing delivery mechanism for light sweet crude oil and corresponding commercial secondary market constitutes such a sophisticated and highly-developed commercial market mechanism that, at any time, the actual flows to and stocks in the delivery area represent precisely the deliverable supply sufficient to support the mechanism. In other words, even though at any time there is additional production that *could* be deliverable supply.

C. Crude Oil Storage in the Cushing Delivery Area

Storage data are provided on a weekly basis by EIA. Details are provided for the U.S. Petroleum Administration for Defense Districts ("PADDs") and Cushing. There are five PADDs and, in some cases, they correspond to broad regions. PADD 2 broadly includes the Midwest; PADD 3 broadly includes U.S. Gulf Coast states and New Mexico; PADD 4 contains the Rocky Mountain States excluding New Mexico. Cushing is the only single location where crude oil official inventory numbers are collected and publicly disseminated on a regular basis anywhere in the world. The actual geographic market that is consistently most applicable to the NYMEX crude oil futures contract would, therefore, include much of PADD 2, not just Cushing.

Nonetheless, NYMEX includes only inventories reported at Cushing, so these underestimate relevant storage. As with production, EIA does not provide details on the quality characteristics of stored crude oil, but the industry experts with whom NYMEX consulted consistently estimated that 60% to 70% of the crude oil stored at Cushing qualified as Domestic Light Sweet Common Stream (to be conservative, the Exchange will discount 40% of inventory in its calculation of deliverable supply estimates).

II. The Cushing Physical Delivery Mechanism: Scope of Deliverable Crude Oil

The Cushing physical delivery mechanism is comprised of a network of nearly two dozen pipelines and 12 storage terminals, with extensive inter-connectivity. Three of the storage facilities — Enterprise, Enbridge, and Plains — and their pipeline manifolds are the core of the Cushing physical delivery mechanism.¹ Physical volumes delivered against the Light Sweet Crude Oil Futures contract within the Enterprise, Enbridge, and Plains systems are at par value. Any deliveries made on futures contracts elsewhere in Cushing require the seller to compensate the buyer for the lower of the transportation netbacks from these facilities to where the delivery occurs. Detailed information about the inflowing and outflowing pipelines is contained below in Table 2.

Terminating obligations in the Light Sweet Crude Oil Futures contract are fulfilled by delivering WTI type light sweet crude oil designated as "Domestic Common Stream" by Enterprise Products LLC. Market participants commonly refer to the light sweet deliverable streams as "WTI." In addition, the Domestic Common Stream includes a fungible blend of light sweet streams produced in the U.S. shale oil areas, including the Bakken, Niobrara, and Permian producing areas. Furthermore, each of these light sweet crude oil streams is fungibly blended and included as part of the "Domestic Common Stream" within the complex that comprises the Cushing delivery mechanism, as well as in the WTI physical market which calls for delivery in the Cushing delivery mechanism.

III. Physical Market Trading Structure and Term Contracts

A. Physical Market Trading Structure

Typically, there is a chronology of sales and purchases of crude oil in the onshore U.S. market that starts with a sale from producer and finishes with a purchase by an end-user to consume the crude oil. First-sales are from producers to aggregators or other middleman-type firms with delivery at the property where it is produced. The first-sale buyer transports oil downstream from the point of sale. Usually the first-sale buyer resells the oil to someone other than the end-user but sometimes sells directly to the end-user.

Final sales are sales to end-users who when they consume the oil remove it from the supply chain. Endusers, however, also resell oil. Such end-user re-sales sometimes occur during the same commercial cycle in which they purchased it; other times, they occur during a later commercial cycle after the oil has been stored for a period of time. Like end-users, other buyers of oil also can either resell it immediately or store

¹ Three of the major sources for the cash-market information provided herein are Plains All America, Enterprise and Enbridge. Enterprise oversees the vast majority of deliveries in the Cushing Delivery Market and, as indicated, Enterprise and Enbridge are the core delivery mechanism operators, with Plains added as a delivery option in February 2022. Plains and Enbridge account for about 60% of the storage available at Cushing.

it first for some period of time and then resell it later. Thus, it is a common commercial practice that the first-sale and multiple subsequent re-sales occur in the same delivery cycle.

As discussed above, the Cushing delivery market is essentially a major reseller market where buyers either: resell the oil to someone else; store the oil and resell it later; store the oil and then consume it later; or transport it to consume it. The Cushing market is essentially downstream of first-sales. Most of the sales in the Cushing market are for resale and not for either storage or final-sale; in fact, the physical market in "WTI," in which the standard form of delivery is within the pipeline system at Cushing, is estimated to be 10-20 times the multiple of "WTI" oil that flows to Cushing. As such, it is clear that most sales are for resale because they constitute the selling, over-and-over (thus, *re*-selling), of the base physical oil that flows to Cushing. *Argus Media* documents about 5-8 times the flow in "WTI" sales but does not capture all of the sales.²

B. Term Contracts

The Exchange has spoken with and interviewed a number of market participants regarding common commercial practices with respect to the use of term contracts in the U.S. onshore crude oil market.³ The responses we received were consistent and they can be summarized as follows:

- Almost all first-sales of production are sold term; as discussed in the previous section, typically for delivery on the property where it is produced (or nearest gathering pipeline or holding tank), and typically to middleman-firms or aggregators. These middleman-firms typically resell the crude oil to other middleman-firms (or participants performing that function) or to end-users. Typically, the first-sales contracts are "evergreen" contracts that can be discontinued by either party with notice. NYMEX is including evergreen contracts in the "term contracts" category.
- There are no restrictions applied to the resale of crude oil bought first-sale on a term basis from producers. In fact, that would clearly not be applicable because sales are typically to aggregators or others acting in a middleman-firm role with the expressed responsibility of reselling the oil.
- The Cushing market is downstream of first-sales; in other words, Cushing is downstream of any term sales from producers. Thus, even if barrels were sold term by the producer, in the Cushing market those barrels are re-sold and re-delivered by either the purchaser from the producer or a subsequent purchaser from that original purchaser. The Cushing market mechanism, which consists of trading and physical delivery of light sweet crude oil, is a commercial secondary (or *spot*) market which is extremely liquid, comprised of broad participation and results in a substantial quantity of physical delivery of crude oil.
- Some end-user refiners in the Cushing market purchase specific light sweet crude oil streams, such as Bakken or Niobrara Light Sweet crude oil, on a term basis, and these refiners tend to segregate a portion of the specific light sweet crude streams for processing at their refineries. Based on conversations with refiners in the Cushing market, the Exchange estimates that approximately 10% of the deliverable supply for Cushing is segregated and designated for use by end-user refiners, and therefore is not available for re-sale in the Cushing market. Consequently, the Exchange will reduce its estimate of deliverable supply in Cushing by 10% to account for the specific light sweet streams that are designated for processing and segregated by the end-user refiners.
- Our sources expressly advised us that any production sold long-term was available for potential resale, such as during periods of refinery maintenance, and this is especially the case in the Cushing market.

² The commercial market for physical delivery of light sweet crude oil in Cushing is a *secondary* (or *spot*) market mechanism. The number of physical deliveries in this market each month is 240 million barrels or higher (240,000 futures contracts equivalent or higher).

³ These include: Plains All America, a major Midcontinent aggregator and marketer and operator of pipeline and storage terminals including in Cushing; and an Energy Market Participant Group of several dozen market participants organized through Hunton & Williams LLP to discuss and comment on Regulatory issues.

C. Crude Oil Production

The production area that supplies crude oil to Cushing via pipeline and rail is comprised of the following eight (8) states: North Dakota, Montana, Wyoming, Colorado, New Mexico, Onshore Texas, Oklahoma, and Kansas.

In the three-year period of February 2019 through January 2022, the average production of crude oil available in the eight states was approximately 8.3 million barrels per day. Based on discussions with industry participants, our estimate of the portion of that average production which would qualify as Domestic Light Sweet Common Stream is 50% or higher— i.e., approximately 4.15 million barrels per day. The 4.15 million barrels per day of crude oil production is equivalent to approximately 124.75 million barrels per month, or 124,750 futures contracts equivalents (contract size: 1,000 barrels).

Table 1 below provides annual production data available for production in the eight states that supply the Cushing crude oil market for the period of February 2019 through January 2022. The data show that production peaked in 2019, and then declined in 2020, and has remained relatively steady. As indicated above, the Exchange has determined to not utilize production data in its deliverable supply estimate, but the data demonstrates that production levels are more than sufficient to support the actual flows of deliverable product to the delivery location.

D. Crude Oil Flows to the Cushing Delivery Area

Currently, there is approximately 4.1 million b/d of inflow pipeline capacity to Cushing and 3.3 million barrels per day of outflow capacity. In addition, according to the EIA, there are 92.1 million barrels of storage capacity in the Cushing area which continues to grow steadily.

The Exchange collects inbound Cushing crude oil flows periodically but not on an on-going or scheduled basis as such information is proprietary and non-public. Based on information provided by industry sources in Table 2 below, as of December 2020, actual flows of crude oil to Cushing have ranged from 2.3 million to 2.6 million barrels per day, with Domestic Light Sweet Common Stream Crude Oil averaging between 1.3 to 1.5 million barrels per day.⁴ On a 30-day monthly basis, actual flows of Domestic Light Sweet Common Stream Crude Oil ranged from 39 to 46.5 million barrels per month, or 39,000 to 46,500 Light Sweet Crude Oil futures contract equivalents.

As of July 2018, actual flows of crude oil in-bound to Cushing have ranged from 2.2 million to 2.5 million barrels per day as shown in Table 3 below, with Domestic Light Sweet Common Stream Crude Oil averaging between 1.270 to 1.450 million barrels per day.⁵ On a 30-day monthly basis, actual flows of Domestic Light Sweet Common Stream Crude Oil ranged from 38.0 to 43.5 million barrels per month, or 38,000 to 43,500 Light Sweet Crude Oil futures contract equivalents.

As of March 2015, estimated in-bound flows of Domestic Light Sweet Common Stream Crude Oil into Cushing averaged between 920,000 and 1,000,000 barrels per day as illustrated in Table 4 below. On a 30-day monthly basis, actual flows of Domestic Light Sweet Common Stream Crude Oil were 27.6 million to 30.0 million barrels per month or 27,600 to 30,000 Light Sweet Crude Oil futures contract equivalents.

Given that the Exchange only collects pipeline flow data on a periodic basis, the Exchange is unable to provide a three-year average of Domestic Light Sweet Common Stream Crude Oil flows into Cushing. As such, the Exchange determined to average the 2015, 2018 and 2020 estimated flows data collected. The average of the ranges for 2015, 2018 and 2020 for Domestic Light Sweet Common Stream Crude Oil flows into Cushing are 35,000 to 40,000 contract equivalents. The midpoint of the average of the ranges is approximately 37,500 contract equivalents.

⁴ The sources were various pipeline operators and other industry sources.

⁵ The sources were: Plains All America, an aggregator and marketer of crude oil production and pipeline and storage terminal operator at Cushing; and other industry sources.

E. Crude Oil Storage in the Cushing Delivery Area

As of March 2021, EIA reported that shell storage capacity at Cushing was 92.1 million barrels and working storage capacity was 76.6 million barrels.⁶ Currently, there is substantial excess working capacity at Cushing (approximately 53 million barrels). Finally, it should be noted that, at least on a temporary basis, storage can exceed working capacity and it is common for an individual tank to reach 85-90% of shell capacity (which exceeds the 83% average underlying the EIA estimates).

Table 4 below provides monthly averages of weekly Cushing stocks for the period beginning February 2019 through January 2022 as published by the EIA. For the three-year average from February 2019 through January 2022, inventories averaged 45.08 million barrels and ranged from about 28 million to 61 million barrels. NYMEX asked operators of storage in Cushing if they would share specific data on quantities of Domestic Light Sweet Common Stream Crude Oil stored at their facilities and they responded that such data were confidential. As discussed above, the Exchange estimated that approximately 60% of the total oil stored at Cushing qualified as Domestic Light Sweet Common Stream Crude Oil. Based on the foregoing, for the February 2019 through January 2022 period, the monthly average Domestic Light Sweet Common Stream Crude Oil stored at Cushing was approximately 27.0 million barrels or 27,000 futures contract equivalents.

The Exchange has further evaluated both operational practices at storage facilities as well as commercial practices by customers of storage facilities to determine if some components of inventoried product could rightfully be considered *not* to be readily deliverable.

With respect to operational practices, based on discussions with some industry experts, the Exchange conservatively estimates that 6.75% of stored product, on average, is required for operational minimums.⁷ This converts into discounting an estimated 1.8 million barrels of Domestic Light Sweet crude oil based on the three-year average storage level (or 1,800 contract equivalents). In applying a discount of 6.75% to account for operational minimums, average monthly Domestic Light Sweet Common Stream Crude Oil for the February 2019 through January 2022 period is further reduced to approximately 25,200 contract equivalents.

With respect to commercial practices, the Exchange specifically sought whether storage customers were expressly allotting any stored barrels at Cushing for refining that were, therefore, unavailable for secondary market delivery. We consistently heard from market participants that was not the case; that barrels stored at Cushing are not specifically targeted for scheduled refining. Rather, refiners typically store barrels targeted for scheduled refining in tanks on the premises at their respective refineries or at other storage facilities. However, we did hear from one refiner that they keep barrels stored at Cushing for the contingency that there could be some unexpected interruption in their refinery supply; and, rather than refine the barrels stored at Cushing, they use them to trade for other barrels they would refine. Thus, the Exchange determined to further reduce the average monthly Domestic Light Sweet Common Stream crude oil stored at Cushing to account for this *contingency storage* in our estimate of deliverable supply. We estimate this quantity to be 2 million barrels (or 2,000 contract equivalents) of Domestic Light Sweet crude oil. Therefore, for the February 2019 through January 2022 period, the Exchange estimates stored product at Cushing (adjusted for quality specifications, operational minimums and contingency storage) and which is readily available for delivery against the Light Sweet Crude Oil Futures contract to be approximately 23,200 contract equivalents.

⁶ <u>https://www.eia.gov/petroleum/storagecapacity/storagecapacity.xlsx</u> - Table 2. Shell capacity is defined by EIA as the design capacity of a petroleum storage tank which is always greater than or equal to working storage capacity.

⁷ We have been advised that, for older tanks, the operational minimum is 9% and, for newer tanks, it is 4.5%. Our assessment is that the majority of tanks at Cushing would qualify as newer. Nonetheless, to be conservative, we have applied the mid-point percentage—6.75%-- for all of Cushing.

ANALYSIS OF DELIVERABLE SUPPLY

Based on the above analysis, the Exchange determined at this time to base its estimates of deliverable supply on the sum of:

- Storage: 23,200 contract equivalents (which represents the average monthly inventory for the February 2019 - January 2022 period adjusted to account for quality specifications, operational minimums and contingency storage); and
- Inflow: 37,500 contract equivalents (which represents the midpoint of the average of the ranges of the 2015, 2018 and 2020 Domestic Light Sweet Common Stream Crude Oil flows into Cushing).

The total estimated deliverable supply, consisting of storage and pipeline inflows, was 60,700 contract equivalents. Additionally, and as noted in the above analysis, the Exchange shall apply a 10% haircut to the sum of inventory storage and inflows into Cushing in order to discount segregated barrels that may be designated for processing by end-user refiners and typically not available for re-sale in the Cushing market. Therefore, after applying the 10% haircut, the Exchange has determined the estimated deliverable supply available for delivery against the Light Sweet Crude Oil Futures contract at approximately 54,630 futures contract equivalents per month.

The spot month limits for the underlying Light Sweet Crude Oil Futures contract utilize a tiered structure of 6,000/5,000/4,000 contracts for the final three days of trading in the expiring contract month. Based on the foregoing analysis, the current spot month position limit of 6,000 contracts represents 11.0% of the estimated monthly deliverable supply. Further, the current spot month position limit of 5,000 contracts represents 9.2% of the estimated monthly deliverable supply. Finally, the current spot month position limit of 4,000 contracts represents 7.3% of the total estimated monthly deliverable supply.

For purposes of calculating compliance with position limits, the Micro WTI Crude Oil Futures contract aggregates into the financially settled Crude Oil Last Day Financial Futures contract (Rulebook Chapter: 828; Commodity Code: 26) at a ratio of 10:1. The Crude Oil Last Day Financial Futures contract is a cash-settled look-alike contract of the underlying Light Sweet Crude Oil Futures contract and is used for compliance purposes for aggregation of position limits for the financially settled Micro WTI Crude Oil Futures contract. The existing spot month position limits for the Crude Oil Last Day Financial Futures contract utilize a tiered structure of 6,000/5,000/4,000 contracts for the final three days of trading in the expiring contract month and are identical to the Light Sweet Crude Oil Futures contract.
