## 1 P R O C E E D I N G S

2 (9:16 a.m. EST)

3 MS. GOLDSMITH: Thank you very much. Good morning  
4 everyone. As a Designated Federal officer for the  
5 Global Markets Advisory Committee, it is my pleasure to  
6 call this meeting to order.

7 I'd like to welcome everyone to today's meeting.  
8 This is the fourth meeting under the sponsorship of  
9 Commissioner Stump and the second and final of 2020.  
10 In light of the global response to the COVID-19  
11 pandemic, we are holding today's meeting as a virtual  
12 meeting to protect the safety of agency personnel, GMAC  
13 members, guest panelists, and the public.

14 To ensure that today's meeting goes as smoothly as  
15 possible, there are a few logistical items that I need  
16 to mention. Because this is a virtual meeting, it is  
17 also being broadcast in a live stream on the internet,  
18 so please be sure to identify yourself before speaking.  
19 Also, please signal when you have completed your  
20 comments, so that we can continue with the next speaker  
21 or question. Please ensure that your phone is unmuted  
22 before you start to speak, that you speak clearly into

1 your phone, and that you re-mute your line when you are  
2 done speaking.

3 For GMAC members and Commissioners, if you would  
4 like to be recognized during the discussion, please use  
5 the WebEx chat icon on the bottom of the screen, select  
6 the "All Panelists" option within the drop down menu,  
7 indicate that you have a comment or a question and  
8 press enter. If any meeting participant needs  
9 assistance during the call, please dial star-zero to  
10 connect to the conference operator or message me  
11 directly within the WebEx chat.

12 Finally, please keep your telephone line muted  
13 when you are not speaking. If you do not mute your  
14 line, the conference operator may need to mute it for  
15 you.

16 I'd now like to turn things over to the GMAC  
17 sponsor, Commissioner Dawn Stump, for her opening  
18 remarks.

19 COMMISSIONER STUMP: Good morning and welcome to  
20 the final Global Markets Advisory Committee meeting of  
21 the year.

22 This is Dawn Stump and I would like to begin by

1     thanking Chairman Tarbert, and my fellow Commissioners  
2     for attending today's meeting. I also want to  
3     recognize that due to the global nature of this  
4     committee, there are many members and panelists  
5     participating in local time zones that may be less than  
6     convenient, and I'm extremely grateful for their  
7     willingness to do so.

8             I would especially like to thank all of today's  
9     esteemed presenters for being here and for taking the  
10    time out of your busy schedules. And in the case of  
11    Takashi for joining us during your overnight hours to  
12    contribute to today's important discussion.

13            Additionally, I would like to thank Chair Angie  
14    Karna for her leadership of the GMAC and Andree  
15    Goldsmith, the GMAC Designated Federal Officer, for  
16    organizing today's meeting.

17            As the year comes to a close, I also want to take  
18    the opportunity to recognize the specific contributions  
19    of this committee to the CFTC's work. During your last  
20    meeting we focused on the need to better align our  
21    global regulatory expectations for margin requirements  
22    on transactions not subject to central clearing. Since

1 then the Commission has acted on a number of the  
2 related recommendations received from this committee  
3 and continues to consider other elements of the report  
4 you submitted, from your Subcommittee on Margin  
5 Requirements for Non-Cleared Swaps. This is but one  
6 indication of how important your work is here to  
7 informing the Commission, and for that we are grateful.  
8 To all of those who serve on each of the CFTC advisory  
9 committees and subcommittees, I just wish to say thank  
10 you.

11 Having devoted the last GMAC meeting to properly  
12 calibrating the regulations of non-centrally cleared  
13 derivatives, today we will shift our focus to advancing  
14 clearing in the global derivatives market.

15 The first panel will focus on regulatory  
16 developments affecting the global clearing system.  
17 August Imholtz and Abigail Knauff from the CFTC's  
18 Division of Clearing and Risk will present on the  
19 CFTC's recent rulemaking concerning registration with  
20 alternative compliance for non-U.S. derivatives  
21 clearing organizations. Then Patrick Pearson, Head of  
22 Financial Market Infrastructure at the European

1 Commission, will discuss the finalization of EMIR 2.2,  
2 and in particular, the regulation framework for  
3 supervision of third country CCPs.

4 And Takashi Nagaoka, Deputy Commissioner for  
5 International Affairs at the Financial Services Agency  
6 of Japan, will discuss Japan's interest in the CFTC  
7 providing an exemption for CCPs to be able to offer  
8 clearing services to U.S. clients.

9 These three presentations will together highlight  
10 the importance of mutual recognition of comparable  
11 comprehensive regulatory frameworks for supervising  
12 central counterparties around the world. We will  
13 reflect on the progress we have made to-date and what  
14 more can be done to advance the shared goals of  
15 increasing central clearing for derivatives.

16 During our second panel, four presenters will look  
17 back at global derivatives clearing over the course of  
18 2020, with a particular focus on the impact of the  
19 COVID-19 pandemic.

20 First, Nick Rustad, Chairman of the Board of  
21 Directors of FIA, will present a clearing members'  
22 perspective on CCP margin requirements during the

1 market volatility caused by the pandemic. We will then  
2 hear from representatives of two CCPs on their  
3 respective experiences during the pandemic: Sean  
4 Downey, Executive Director of Clearing, Risk, and  
5 Capital Policy at CME Group, and Dmitriy Senko, Chief  
6 Risk Officer at Eurex Clearing.

7 To wrap things up, Sayee Srinivasan, Deputy  
8 Director in the Division of Clearing and Risk at the  
9 CFTC, will present a regulator's perspective on CCP  
10 margin practices during the recent market volatility.

11 I'm hopeful that these presentations will  
12 contribute to the ongoing dialogue regarding lessons  
13 learned from the market volatility earlier this year,  
14 so that global clearing systems can remain resilient in  
15 the face of future market stresses. I'm very much  
16 looking forward to today's presentations, and again I  
17 want to thank all of our panelists for being here to  
18 further these important conversations pertaining to  
19 global derivatives clearing.

20 That concludes my opening remarks, I'll turn it  
21 back to Andree. Thank you.

22 MS. GOLDSMITH: Thank you Commissioner Stump.

1 Chairman Tarbert.

2 CHAIRMAN TARBERT: Thank you Andree and I am very  
3 pleased to be here today to address this group.

4 This may be, I think, my last GMAC meeting, at  
5 least as Chairman. So it's wonderful to be here with  
6 all of you today. Over the last 17 months, the CFTC  
7 has set and met some very ambitious goals. And we did  
8 all of that while managing the fallout of COVID-19,  
9 which has changed the way all of us work and  
10 collaborate.

11 Many of our achievements, and this is the point of  
12 my remarks today, have actually been built on the great  
13 work of GMAC, as well as Commissioner Stump's  
14 leadership. So I want to sincerely thank you,  
15 Commissioner Stump, for your vision and commitment.  
16 You have made the GMAC an important part of our  
17 success. In fact, as Commissioner stump mentioned, you  
18 know, several of our policymaking successes in the last  
19 12 months alone have drawn on the ideas that are  
20 discussed right here at the GMAC.

21 So, for example, GMAC has taken up and we'll talk  
22 about today, some important international issues,

1 including the implementation of EMIR 2.2, and of  
2 course, I'm pleased to say that we have made great  
3 progress on that issue. And we've greatly benefited  
4 from this committee's insight and insights in doing  
5 that and I can honestly say that I think our  
6 relationship with Europe and other countries around the  
7 world is stronger today than it's ever been. We've  
8 been able to reach what I think is a truly win-win  
9 resolution.

10 GMAC has also advanced our thinking on the issue  
11 of exemptions from registrations for DCOs, or  
12 clearinghouses, which we actually turned into a final  
13 rule last month. And I'm confident that this committee  
14 will continue to be an important voice on that topic,  
15 as well as on related matters of equivalence and  
16 substituted compliance.

17 And then finally, as Commissioner Stump mentioned,  
18 we've benefited greatly from GMAC's insight into the  
19 implementation and phasing of the uncleared margin  
20 rules, your recommendations on the scoping and  
21 implementation, the subcommittee report, were  
22 especially helpful. Not only in generating ideas, but

1 actually allowing us to translate those ideas into  
2 final rules.

3 So like those before it, today's meeting is sure  
4 to advance more important ideas, particularly involving  
5 CCPs, clearing, and related issues affecting our global  
6 markets. And again, I just want to thank everyone on  
7 the GMAC for your service for providing that. It's  
8 critically important for a financial regulatory agency,  
9 such as us, to be able to listen and really glean  
10 insights from all of our key diverse stakeholders. So  
11 thank you very much.

12 MS. GOLDSMITH: Thank you Chairman Tarbert,  
13 Commissioner Quintenz.

14 COMMISSIONER QUINTENZ: Thank you Andree and thank  
15 you for your leadership from the staff perspective of  
16 GMAC, and of course, thank you to Commissioner Stump.  
17 The agendas of these meetings have been profound, very  
18 well put together. And as Chairman Tarbert said, has a  
19 direct and positive impact on our policymaking.

20 It's one thing to hold a meeting and to discuss  
21 various issues, it's another thing to organize them  
22 over a long-term perspective on topics of critical

1 importance to the agency and the markets and have those  
2 discussions actually inform what we do as a Commission.  
3 And I just really like to thank her for her leadership  
4 and vision there.

5 With regards to today's agenda, I am very much  
6 looking forward to hearing all the presentations, these  
7 are issues that are close to my heart. I know they're  
8 very, very close to Commissioner Stump's heart as well  
9 as the rest of our Commissioners and our Chairman, and  
10 highlighting the -- what I think is very positive  
11 progress that has been made on the issues of deference  
12 surrounding CCP recognition, examination, resiliency,  
13 while we also acknowledge that our regime is based off  
14 of intermediaries and infrastructure and registration.

15 I think it's important to understand how we can  
16 view that regime in the context of making sure we  
17 provide access to U.S. clients to the best liquidity  
18 pools possible.

19 So I appreciate the balancing act that we may hear  
20 more about today, and I'm very much looking forward and  
21 thanks again for the opportunity to join you.

22 MS. GOLDSMITH: Thank you Commissioner Quintenz.

1 Commissioner Behnam.

2 COMMISSIONER BEHNAM: Thanks Andree, and good  
3 morning to everyone on the GMAC. It's great to be with  
4 you. I'm looking forward to today's discussion. And  
5 of course, thanks to Commissioner Stump for her  
6 leadership and convening the meeting today, as we end  
7 off the year Andree thanks to you, of course, as the  
8 Designated Federal Officer and also thank you to Angie  
9 Karma for her chair and her leadership of the  
10 committee.

11 You know, really just kind of repeating what has  
12 been said already, but it's been great to see the GMAC  
13 convene over the past 12 months and really bring  
14 thoughtful recommendations to the Commission which we  
15 have taken action on. I think everyone's benefited  
16 from that.

17 And regarding today's agenda, as challenging as  
18 the early months of this year have been from a market's  
19 perspective and certainly dealing with the COVID  
20 pandemic from a work and personal perspective over the  
21 past few months as we emerge, hopefully, in the next  
22 few months and into 2021. I think we all at least,

1 some of us feel very confident that markets responded  
2 well, but certainly I think today's discussion will  
3 help us as we evaluate lessons learned and think about  
4 what we can do better for next time.

5 So a very important discussion, and important  
6 timing to kick it off now as we end 2020 and look into  
7 2021. As always, to do better and build more strong  
8 resilient markets which, of course, will benefit  
9 everyone who's a part of this discussion today.

10 So thanks again to everyone and I look forward to  
11 the discussion.

12 MS. GOLDSMITH: Thank you Commissioner Behnam.  
13 Commissioner Berkovitz.

14 COMMISSIONER BERKOVITZ: Thank you, Andree. Good  
15 morning, good afternoon, or good evening to everybody  
16 depending on where one may be located.

17 I'm very pleased to be here today, also, I will  
18 echo the sentiments expressed by my fellow  
19 Commissioners about the productivity and the great work  
20 that this committee has done. And I'd just like to  
21 note that I really think the way this committee has  
22 operated and the Commission's consideration of the

1 committee's recommendations and the recent regulatory  
2 action we took based on those recommendations, really  
3 reflects excellence, I think, in government decision-  
4 making and public participation. In my mind, this is  
5 really the way to develop sound regulations with a  
6 strong consensus for that approach.

7 The GMAC really represents a wide variety of  
8 expertise and experience and wisdom in the operation of  
9 our markets globally, and took the time, made  
10 recommendations to the Commission in a public meeting.  
11 We put those recommendations out for public comment,  
12 received public comments, deliberated in a collegial  
13 fashion, and now within the space of a relatively short  
14 timeframe, particularly in government decision-making  
15 time, we were able to make those improvements to our  
16 regulations in the time of a COVID pandemic when there  
17 are all sorts of other priorities as well.

18 So I think this is really -- I thank the committee  
19 for their participation. And I'd particularly like to  
20 thank Commissioner Stump for her leadership in making  
21 this happen from working with the committee on the  
22 agenda, the committee to providing recommendations that

1 are really useful to the CFTC and really further the  
2 objective of harmonization and liquidity in global  
3 markets. That benefits not only the U.S. markets, but  
4 the markets globally.

5 And without Commissioner Stump's efforts in this  
6 regard, it wouldn't have happened. So Commissioner  
7 Stump, thank you for your leadership. And Angie Karna  
8 and Andree Goldsmith, thank you for your leadership in  
9 making this happen as well.

10 So I'm looking forward to today's discussions and  
11 presentations. Thank you.

12 MS. GOLDSMITH: Thank you, Commissioner Berkovitz.  
13 Thanks again to all the Commissioners for taking part  
14 in this meeting, and for sharing your remarks with the  
15 GMAC.

16 Before we begin with our presentations today, I  
17 would like to do a roll call of GMAC members on the  
18 phone so that we have your attendance on the record.  
19 After I say your name and firm, please indicate that  
20 you are present. Please don't forget to unmute your  
21 phone in order to speak.

22 Chris Allen, Standard Chartered Bank.

1 MR. ALLEN: Yes, I'm here.

2 MS. GOLDSMITH: Tedd Backer, Morgan Stanley.

3 (No response.)

4 MS. GOLDSMITH: Ashley Belich, RBC Capital

5 Markets.

6 MS. BELICH: Present.

7 MS. GOLDSMITH: Shawn Bernardo, TP ICAP SEF.

8 (No response.)

9 MS. GOLDSMITH: Darcy Bradbury, D.E. Shaw and Co.

10 MS. BRADBURY: Here.

11 MS. GOLDSMITH: Maria Chiodi, Credit Suisse

12 Securities LLC.

13 MS. CHIODI: Here.

14 MS. GOLDSMITH: Clive Christison, BP.

15 (No response.)

16 MS. GOLDSMITH: Joe Cisewski, Better Markets.

17 (No response.)

18 MS. GOLDSMITH: Jim Colby, Coalition for

19 Derivatives End-Users.

20 (No response.)

21 MS. GOLDSMITH: Gerry Corcoran, R.J. O'Brien and

22 Associates.

1 (No response.)

2 MS. GOLDSMITH: Sunil Cutinho, CME Clearing.

3 (No response.)

4 MS. GOLDSMITH: David Goone, Intercontinental  
5 Exchange, Inc.

6 MR. GOONE: Here.

7 MS. GOLDSMITH: Paul Hamill, Citadel Securities.

8 MR. HAMILL: Present.

9 MS. GOLDSMITH: Amy Hong, Goldman Sachs.

10 MS. HONG: Present.

11 MS. GOLDSMITH: John Horkan, LCH.

12 MR. HORKAN: Present.

13 MS. GOLDSMITH: Adam Kansler, IHS Market.

14 (No response.)

15 MS. GOLDSMITH: Angie Karna, Nomura Securities  
16 International, Inc.

17 Angie, I didn't hear you. I'm not sure if you  
18 have unmuted.

19 (No response.)

20 MS. GOLDSMITH: Bob Klein, Citigroup.

21 MR. KLEIN: Yes, I'm here.

22 MS. GOLDSMITH: Agnes Koh, Singapore Exchange.

1 (No response.)

2 MS. GOLDSMITH: Ben MacDonald, Bloomberg LP.

3 MR. MacDONALD: Present.

4 MS. GOLDSMITH: Erik Tim Müller, Eurex Clearing

5 AG.

6 MR. MÜLLER: Present.

7 MS. GOLDSMITH: Joe Nicosia, Louis Dreyfus

8 Company.

9 (No response.)

10 MS. GOLDSMITH: Murray Pozmanter, DTCC.

11 (No response.)

12 MS. GOLDSMITH: Tom Sexton, National Futures

13 Association.

14 MR. SEXTON: Present.

15 MS. GOLDSMITH: Jessica Sohl, HC Technologies.

16 MS. SOHL: Present.

17 MS. GOLDSMITH: Thane Twiggs, Cargill Risk

18 Management.

19 (No response.)

20 MS. GOLDSMITH: Supurna VedBrat, BlackRock.

21 MS. VEDBRAT: Present.

22 MS. GOLDSMITH: Masahiro Yamada, JP Morgan

1 Securities.

2 MR. YAMADA: I'm present.

3 MS. GOLDSMITH: Great, thank you. If there were  
4 any GMAC members who were unable to indicate your  
5 presence on the call, please email me or message me  
6 directly in WebEx to confirm your attendance for the  
7 record.

8 With that I'd like to turn the program over to  
9 Angie, GMAC Chair, for an introduction of our  
10 presenters on panel one.

11 (Pause.)

12 MS. GOLDSMITH: We seem to have -- we seem to be  
13 having a little bit of trouble hearing Angie, so why  
14 don't I go ahead and announce the first presenters and  
15 during that presentation we'll get the technology  
16 straightened out.

17 Just a few logistical reminders before the  
18 presenters start. Please keep your phones on mute  
19 while you're not speaking. Following the presentations  
20 there will be an opportunity for GMAC members and  
21 Commissioners to ask questions and discuss the  
22 presentations. If you would like to be recognized to

1 speak, please use the WebEx chat icon on the bottom of  
2 the screen. Select "All Panelists," indicate that you  
3 have a question and press enter. Please identify  
4 yourself and your firm prior to speaking and indicate  
5 when you are finished speaking.

6 The first item on the agenda is a series of  
7 presentations on regulatory developments to advance  
8 global derivatives clearing. Our first panelists will  
9 be Abigail Knauff and August Imholtz, who are both  
10 Special Counsel in the Clearing Policy Branch in the  
11 Division of Clearing and Risk at the CFTC.

12 Ms. Knauff and Mr. Imholtz will present on the  
13 CFTC's rulemaking concerning alternative compliance for  
14 non-U.S. derivatives clearing organizations. Please go  
15 ahead.

16 MR. IMHOLTZ: Good morning Commissioner Stump,  
17 Chairman Tarbert and Commissioners Quintenz, Behnam,  
18 and Berkovitz. My name is August Imholtz, I'm an  
19 attorney in the Clearing Policy Branch of the Division  
20 of Clearing and Risk. My colleague, Abigail Knauff  
21 who's also an attorney in the Clearing Policy Branch in  
22 DCR, and I will provide the GMAC with an overview of

1 the Commission's recent rulemaking, registration with  
2 alternative compliance from non-U.S. derivatives  
3 clearing organizations.

4 In this rulemaking, the Commission amended its  
5 regulations to provide a second registration option for  
6 non-U.S. DCOs that clear swaps for U.S. persons,  
7 including for FCM customers, if those DCOs meet certain  
8 eligibility criteria. Prior to this rule which became  
9 effective on November 20th of this year, the CFTC  
10 requirements did not distinguish among registered DCOs  
11 based on whether they are organized within or outside  
12 of the United States. Non-U.S. DCOs were subject to  
13 the same requirements in the Commodity Exchange Act and  
14 the Commission regulations that govern U.S. DCOs. This  
15 illustrates one of the two primary considerations that  
16 were fundamental in driving this rulemaking.

17 First, the Commission recognized the existence of  
18 regulatory overlap. Non-U.S. DCOs were required to  
19 comply with both the U.S. regulatory regime and the  
20 regulatory regimes in their home countries.

21 Second, the Commission also recognized that there  
22 are significant differences in the extent to which non-

1 U.S. DCOs clear swaps for U.S. persons. To address the  
2 circumstances, the Commission added to its regulations  
3 a new registration and compliance framework in Subpart  
4 D to permit a non-U.S. DCO to register with the  
5 Commission, yet comply with the DCO core principles  
6 through compliance with its home country regulatory  
7 regime, subject to certain conditions and limitations.

8 Next slide please.

9 A non-U.S. clearing organization that is applying  
10 for registration as a DCO subject to alternative  
11 compliance will be eligible if the clearing  
12 organization is in good regulatory standing in its home  
13 country, a memorandum of understanding or similar  
14 arrangement is in place between the Commission and the  
15 clearing organization's home country regulator, the  
16 Commission determines that the clearing organization's  
17 compliance with its home country regulatory regime will  
18 satisfy the DCO core principles in the Commodity  
19 Exchange Act, and the clearing organization does not  
20 pose a substantial risk to the U.S. financial system.

21 Next slide please.

22 The Commission may determine that a non-U.S. DCO

1 poses substantial risk to the U.S. financial system, if  
2 that DCO holds 20 percent or more of the required  
3 initial margin of U.S. clearing members for swaps  
4 across all registered and exempt DCOs and 20 percent or  
5 more of the initial margin requirements for swaps at  
6 that DCO is from U.S. clearing members.

7 Where a DCO is at or near the 20 percent  
8 threshold, the Commission has discretion as to whether  
9 the DCO would or would not be eligible for alternative  
10 compliance. The substantial risk test uses the term  
11 U.S. clearing member, which means a clearing member of  
12 a non-U.S. DCO that is either an FCM or organized in  
13 the United States, or a non-U.S. entity whose ultimate  
14 parent company is organized in the U.S.

15 A bit of background and context about the  
16 substantial risk test. The first prong is designed to  
17 address systemic risk. The Commission's primary  
18 systemic risk concern arises from the potential for  
19 loss of clearing services for a significant part of the  
20 U.S. swaps market in the event of a catastrophic  
21 occurrence affecting the DCO.

22 The second prong of the test is intended to

1 respect international comity by ensuring that the  
2 substantial risk test captures only those non U.S. DCOs  
3 with clearing activity attributable to U.S. clearing  
4 members sufficient to warrant more active oversight by  
5 the Commission.

6 Overall, the substantial risk test is designed to  
7 better calibrate the Commission's oversight of Non-  
8 U.S. DCOs, based on the principle of deference to their  
9 home country regulators, while at the same time, taking  
10 into consideration risk to U.S. clearing members and  
11 ultimately risk to the U.S. financial system.

12 For context, of the 15 DCOs currently registered  
13 with the Commission, five are organized outside of the  
14 United States. But only three would be eligible to  
15 pursue registration under the alternative compliance  
16 framework. One of those five clears futures traded on  
17 a DCM, and the other is one of the largest DCOs in the  
18 world, and is likely to pose a substantial risk to the  
19 U.S. financial system.

20 So now that I've discussed the purpose of the  
21 registration with alternative compliance framework, and  
22 which DCOs are eligible to register as a Subpart D DCO.

1 I'm going to turn the presentation over to Abigail to  
2 discuss the regulatory requirements and procedures for  
3 the alternative compliance framework, beginning with  
4 the next slide.

5 Next slide please.

6 MS. KNAUFF: Thank you, August. This slide gives  
7 a high level comparison of the requirements for DCOs  
8 registered under the original registration framework  
9 and the alternative compliance framework. There are  
10 two notable differences.

11 First, while all registered DCOs are subject to  
12 the DCO core principles in the CEA, a Subpart D DCO is  
13 able to comply with the DCO core principles through  
14 compliance with the applicable legal requirements in  
15 its home country. A Subpart D DCO does not have to  
16 comply with each of the Commission's implementing  
17 regulations in Subparts B and C of Part 39. A Subpart  
18 D DCO, however, must comply with all of the conditions  
19 in its order of registration.

20 The second notable difference is that the  
21 Commission has exempted Subpart D DCOs from the rule  
22 submission requirements in Part 40, with the exceptions

1 of rule filings related to customer protection and swap  
2 data reporting rule changes.

3 All registered DCOs must comply with the Part 45  
4 swap data reporting requirements. Next slide.

5 Additionally, as shown in the previous slide, all  
6 registered DCOs, including Subpart D DCOs, must comply  
7 with the Commission's customer protection regime, which  
8 includes Section 4d(f) of the CEA, parts 1 and 22, and  
9 section 39.15 for the treatment of funds.

10 U.S. customers must clear through FCMs at a  
11 Subpart D DCO, and all DCOs, including Subpart D DCOs,  
12 must comply with the CEA and Commission regulations,  
13 which are designed to protect the safety of funds and  
14 assets belonging to clearing members and their  
15 customers.

16 Next slide.

17 An applicant's registration under the original  
18 registration framework must file numerous and extensive  
19 exhibits. The Subpart D DCO applicant will only need  
20 to file a select list of exhibits. The most notable  
21 exhibit is the regulatory compliance chart, in which an  
22 applicant would state the citation and full text of the

1 home country regulator's applicable legal requirements,  
2 and an explanation of how the applicant complies with  
3 each DCO core principle.

4 If the home country regulatory regime lacks legal  
5 requirements that could correspond to a particular DCO  
6 core principle, the applicant will need to explain how  
7 it would satisfy that DCO core principle.

8 Next slide.

9 An order of registration for a Subpart D DCO will  
10 contain certain conditions. First, as discussed  
11 previously, the DCO must comply with the statutory DCO  
12 core principles, the Commission's customer protection  
13 regime, the Part 45 swap data reporting requirements,  
14 the general DCO provisions in Subpart A of Part 39, all  
15 the requirements in Subpart D of Part 39, and the  
16 conditions in this list.

17 Second, DCOs must comply with the open access  
18 requirements to treat swaps with the same terms and  
19 conditions as economically equivalent, allow offset to  
20 the extent permitted at the DCO, and provide non-  
21 discriminatory clearing for swaps executed bilaterally  
22 or on unaffiliated platforms.

1           The third condition, a DCO must consent to the  
2 U.S. jurisdiction and designate, authorize and identify  
3 an agent for service of process in the U.S. and  
4 promptly report any change of its U.S. agent.

5           Fourth, a DCO must comply with and demonstrate  
6 compliance with any condition upon the Commission's  
7 request. A DCO must also make all books and records  
8 open to inspection and copying by a Commission  
9 representative, including promptly making these books  
10 and records directly available to the Commission.

11           Fifth, the Commission must receive a written  
12 representation of good regulatory standing from the  
13 DCO's home country regulator within 60 days of the  
14 DCO's fiscal year end.

15           And finally, the Commission may add other  
16 conditions, based on any other facts and circumstances  
17 it deems relevant. The Commission will consider the  
18 degree of deference that the home country regulator  
19 extends to the Commission's oversight of U.S. DCOs in  
20 determining whether to extend the benefits of  
21 alternative compliance to the DCOs in that  
22 jurisdiction.

1           The Commission will consider this degree of  
2   deference both initially when registering a Subpart D  
3   DCO, and when determining whether compliance under the  
4   framework should continue.

5           Next slide.

6           Subpart D DCOs have periodic and event-specific  
7   reporting requirements, as shown here, and these DCOs  
8   must provide any other information that the Commission  
9   deems necessary, including but not limited to  
10   information for the Commission to evaluate the DCO's  
11   continued eligibility as a Subpart D DCO, review the  
12   DCO's compliance with conditions in the order of  
13   registration and conduct oversight of U.S. clearing  
14   activity.

15          The event-specific reporting requirements are more  
16   limited than requirements for DCOs registered under the  
17   original registration format framework.

18          Next slide.

19          Finally, the Commission codified procedures to  
20   permit it in its own discretion, and upon its own  
21   initiative, to modify the terms and conditions of a  
22   Subpart D DCO's order of registration, if there are

1 changes to or omissions in the facts or circumstances  
2 pursuant to which the order was issued, or if any terms  
3 and conditions of the order have not been met.

4 For example, if the DCO fails to remain in good  
5 regulatory standing, poses a substantial risk to the  
6 U.S. financial system, or the home country regulatory  
7 regime no longer satisfies the statutory DCO core  
8 principles, the Commission would provide notice to the  
9 Subpart D DCO of its intention to modify the order of  
10 registration.

11 This concludes our prepared remarks on the  
12 registration with alternative compliance framework. I  
13 note that in addition to adopting this final rule this  
14 fall, the Commission also codified its existing  
15 approach to exempt DCOs, whereby a non-U.S. DCO is  
16 permitted to clear only proprietary swaps for U.S.  
17 persons.

18 August and I are happy to answer any questions  
19 about the rules during the Q&A. Thank you.

20 CHAIR KARNA: Thank you, Ms. Knauff and Mr.  
21 Imholtz, and apologies for the technical issues  
22 earlier.

1           Our second panelist is Patrick Pearson, Head of  
2   Financial Markets Infrastructure at the European  
3   Commission, who will present on the finalization of  
4   EMIR 2.2, and ESMA's engagement with the CFTC on EMIR  
5   2.2. Please go ahead, Mr. Pearson.

6           (No response.)

7           CHAIR KARNA: Mr. Pearson, are you on the line?

8           (No response.)

9           OPERATOR: Mr. Pearson if you're on, please press  
10   star-zero. Mr. Pearson, your line is now open.

11          MR. PEARSON: Thank you very much and apologies  
12   for the glitch. Can you hear me?

13          CHAIR KARNA: Yes, we can. Thank you, Mr.  
14   Pearson.

15          MR. PEARSON: Thank you very much. I'd like to  
16   thank, first and foremost, Commissioner Stump, for the  
17   kind invitation to speak. I think this has been my  
18   fourth or fifth GMAC over the past years and they've  
19   always been a very helpful and welcome opportunity for  
20   the European Commission to speak on these important  
21   matters.

22          I've been asked to say a few words about our

1 recent regulatory efforts on regulating third country  
2 DCOs. And, like the CFTC, we in the European Union  
3 have been looking at how to consider risk posed by non-  
4 EU DCOs operating on our markets, if they pose risk,  
5 which risks, and what would be the consequences. And  
6 all of this against the backdrop of deference, very  
7 important for global markets with global actors and  
8 global business.

9 The first thing we did was to look at whether  
10 systemic risk could arise from non-EU DCOs operating in  
11 our markets. And in doing that, we immediately looked  
12 at which risks we would think would be relevant. And  
13 we picked up about eight or nine, eight or nine  
14 specific risks that we listed as potentially relevant  
15 in determining if a DCO from outside of Europe would  
16 operate in our markets that we'd need to take into  
17 account.

18 The first is the nature of the transactions. The  
19 complexity, the risk profile, the maturity of those  
20 transactions that are offered in the European Union.

21 The second element we looked at was what would the  
22 effect of a failure or disruption of a third country

1 DCO be on the stability of the European Union's  
2 financial markets. We also looked at the structure of  
3 a DCO's clearing membership, how transparent is it, how  
4 diverse is it. We looked at the extent to which,  
5 importantly, a DCO's clearing would involve trades  
6 denominated in the Euro, or in other Union currencies  
7 for member countries in Europe that aren't part of the  
8 Eurozone like Poland or Sweden.

9 We looked at whether there would be alternative  
10 DCOs offering similar services to those offered by a  
11 non-EU DCO in the European markets. And finally, we  
12 looked at how exposed would EU participants and EU  
13 clients be to a DCO from a third country. Now a whole  
14 list of incredibly complex issues that we needed to  
15 consider.

16 So how did we go about this? Well, the first  
17 thing we did was we reached out to fellow regulators  
18 across the globe. We spoke to our colleagues in many  
19 jurisdictions. I think it's quite fair to say that we  
20 spent quite a considerable amount of time with our  
21 colleagues in the CFTC. The reason for that is that  
22 the colleagues in the CFTC in parallel to our efforts

1 have been looking at, essentially, similar issues. How  
2 do non-U.S. DCOs pose risk to your markets and your  
3 system in the U.S.?

4 So, we have had lots of conversations. We both  
5 learned, and we both listened. And I think it's fair  
6 to say that, certainly, in our regulation that was  
7 published this summer, you can even pick up the fruits  
8 of those bilateral conversations we had with many  
9 regulators and also with those in the CFTC.

10 Let me give you a few examples. The first thing  
11 that we learned, and that was confirmed to us by  
12 colleagues in the CFTC, was that when you look at risk  
13 in your markets there are some risks that do not  
14 objectively pose financial stability risk in your own  
15 market. And you will find that very important  
16 principle in our law, where we specifically refer to  
17 the fact that agricultural products listed and executed  
18 on what we call regulated markets in third countries,  
19 which largely serve domestic and non-financial  
20 counterparties, are not transactions that pose  
21 significant risk. I think we even use the words, they  
22 pose negligible risk to the clearing members and the

1 trading venues in the European Union.

2 So that's something very, very, I think, prominent  
3 that we picked up quite early on in our discussions  
4 with our colleagues in the CFTC.

5 But then the second and third issues that we  
6 picked up, a good example is that we learned very  
7 quickly after intense discussions with colleagues in  
8 the CFTC that it's one thing to put the regulation out  
9 there in which you try to determine what financial  
10 stability risks are. And it's another to try and apply  
11 and implement that to the participants in the markets.  
12 Because what the participants in the markets are  
13 looking for is transparency. And the best way to  
14 achieve that, we learned from the CFTC, was through  
15 quantitative indicators, quantitative thresholds.

16 You have your 2020 rule -- we didn't copy that  
17 rule, but we certainly went home to Europe with a very  
18 clear understanding that that's the only and the best  
19 and the most propitious way to regulate.

20 And that's why, what we did introduce in our own  
21 rules is a series of quantitative indicators.  
22 Quantitative thresholds, if you will, to determine

1 exactly when a DCO from the third country would  
2 objectively pose a systemic risk in the European Union.

3 We decided to look at four specific indicators.  
4 We decided to look at the amount of open interest in  
5 securities transactions.

6 We decided, secondly, to look at the maximum  
7 notional outstanding of derivative transactions or swap  
8 transactions as you call them, denominated in Union  
9 currencies.

10 We also needed to look at the average aggregated  
11 margin requirements and default fund contributions for  
12 accounts held at the third country DCO by European  
13 Union clearing members, obviously to measure and to  
14 mitigate external risk for our banks and other clearing  
15 members.

16 And finally, we wanted to look at the largest  
17 payment obligations that had been entered into by Union  
18 entities. These were very, very clear -- we think --  
19 indicators, and useful indicators for us to measure  
20 risk and to determine whether a third country DCO would  
21 be of systemic importance to us in the European Union  
22 or not.

1           And why is that important? It's important because  
2 we have a very simple system in our rules and  
3 regulations in Europe. If you are not systemically  
4 important, you are what we would call a Tier One DCO.  
5 In essence, nothing changes. The full panoply of  
6 deference of European Union rules will continue to  
7 apply to a DCO from that jurisdiction: full mutual  
8 recognition, full deference, no change essentially to  
9 the current supervisory approach. It's business as  
10 usual.

11           However, if we do determine at a DCO from the  
12 third country that does hit one or more of those  
13 quantitative thresholds, then you could be determined  
14 as a Tier Two DCO, which is a systemically important  
15 DCO. And that has significant consequences, because  
16 that means that the systemic importance that that DCO  
17 poses to our financial system brings with it a number  
18 of requirements and a number of rules and agreements  
19 that need to be in place for that DCO to continue to  
20 operate in the European Union.

21           It even can go further than that if you are Tier  
22 Two and you meet further specific requirements. You

1 can enter into a system of Tier Two-Plus DCO  
2 regulation, in which there are even stricter  
3 requirements, possibly, including a possible  
4 requirement for European participants to only clear  
5 certain trades with a DCO established in the European  
6 Union.

7 So that's how we've set about this, and I must say  
8 and, in all honesty, the many conversations with the  
9 CFTC, with Chairman Tarbert, with the Director of  
10 International Affairs, Mr. Suyash Paliwal and Mr. Tom  
11 Benison from the Chairman's Office over the past year  
12 or so, actually guided us in European Union to come up,  
13 together, with comments from other regulators, to a  
14 system that we think is fair, that is transparent, and  
15 that is equitable as well.

16 Those open and collegial cooperation discussions  
17 that we've had, I think that I am also confirmed in  
18 this, have led us to the conclusion in the European  
19 Union that on the basis of those objective indicators,  
20 that we have not been able to identify a U.S. DCO as  
21 being of systemic importance for the European Union.  
22 Operationally that simply means that U.S. DCOs will

1 continue to operate on and our markets with full  
2 deference as before.

3 And I think what Chairman Tarbert and Mr. Suyash  
4 Paliwal and Mr. Benison have applied is a wonderful  
5 principle. We have a mutual love of William  
6 Shakespeare. And as we all know, he once wrote "Love  
7 all, trust a few, and do wrong to none. All's well  
8 that ends well."

9 So, that is the key element of our legislation  
10 that was published over the summer. Now, that  
11 legislation needs to be operational. And in order to  
12 do that, the European Commission has set up a new and a  
13 separate supervisory authority within the ESMA  
14 framework that will apply and implement these rules and  
15 requirements and will be the talking point for third  
16 country regulators, including the CFTC.

17 Now, the new chairman of that group, Mr. Klaus  
18 Loebler is unable to join us today. He has a board  
19 meeting with ESMA in Paris, but he's certainly asked me  
20 to pass on the message that he is open for business,  
21 and he is really looking forward to continuing a very  
22 good and helpful working relationship with the CFTC.

1 I think my 10 minutes are up and I'll stop there,  
2 Commissioner Stump.

3 CHAIR KARNA: Thank you very much Mr. Pearson.

4 Our final panelist for panel one is Mr. Takashi  
5 Nagaoka, Deputy Commissioner for International Affairs  
6 at the Japan Financial Services Agency. Please go  
7 ahead. Mr. Nagaoka.

8 MR. NAGAOKA: Thank you very much, Commissioner  
9 Stump for a very kind introduction. Good morning to  
10 everybody.

11 First of all, I would like to thank the CFTC for  
12 inviting me today to the renowned Global Markets  
13 Advisory Committee meeting and providing me with the  
14 opportunity to speak about CCPs' cross-border  
15 supervision and deference.

16 Before starting my presentation, I'd like to touch  
17 upon the usual but important disclaimer, i.e. the views  
18 and opinions expressed in this panel discussion are  
19 those of myself and do not necessarily reflect the  
20 official policy or position of JFSA. Now, let me  
21 begin.

22 Due to the COVID-19 pandemic, we experienced an

1 extremely volatile market this past March, and this in  
2 turn has allowed us to reconfirm the importance of the  
3 role CCPs play within the financial system. And while  
4 steps to make CCPs more resilient continue to be  
5 discussed internationally, I believe that from a cross-  
6 border supervision perspective, CFTC's recent  
7 rulemakings, including that on the exempt DCO are very  
8 important and crucial work.

9 And today I'd like to speak about a few points, or  
10 maybe slightly diverging from what Commissioner Stump  
11 has kindly introduced, but they will be the ongoing  
12 international discussions on market fragmentation and  
13 some of the initiatives in Japan, as well as the topic  
14 of the U.S. investors' access to the Japan market in  
15 relation to exempt DCO.

16 So, let me first explain a bit on what is  
17 currently being discussed internationally regarding  
18 market fragmentation. Many of the participants may be  
19 well aware of the subject already, but in any event,  
20 let us have a look at this important development again.

21 Going back a few years under the Japanese  
22 Presidency of 2019 G20, we included addressing market

1 fragmentation as one of the priorities in the G20  
2 finance track, and FSB and IOSCO published reports  
3 respectively on this particular issue in mid-2019.  
4 This in turn has created the momentum for FSB and IOSCO  
5 to review how the rules and restrictions created by  
6 different jurisdictions are contributing to the market  
7 fragmentation and how we will be approaching this issue  
8 going forward.

9 As part of such an initiative, IOSCO's market  
10 fragmentation follow up group, which Japan currently  
11 co-chairs with Quebec AMF, was tasked to review and  
12 identify good and sound practices regarding deference  
13 of regulation and supervision between jurisdictions,  
14 and publish the report in June this year.

15 The concept of deference has been viewed as an  
16 effective way to mitigate market fragmentation. But  
17 the review process is often time consuming and at times  
18 lacks transparency and clarity. The good and sound  
19 practices provided in the published report would  
20 provide useful clues for relevant authorities to  
21 improve the processes for deference determinations by  
22 making them more efficient.

1           The report carries huge significance in that it  
2 provides a direction and momentum in terms of fostering  
3 common understanding and mutual cooperation among  
4 authorities, and thus avoiding market fragmentation  
5 that could cause undue burden and undermine market  
6 efficiency.

7           Now, with that, I would like to discuss some of  
8 the initiatives in Japan in relation to foreign CCPs.  
9 Japan currently has a two-tier system for allowing  
10 foreign CCPs to operate their clearing business in the  
11 Japanese financial market. In principle, foreign CCPs  
12 are required to obtain a license prior to their  
13 operation. However, there is also an exemption system  
14 where foreign CCPs may be exempted from licensing  
15 itself, subject to the condition that default of the  
16 trailing transactions would have a minor impact on  
17 Japan's capital market.

18           Both channels are designed so as to take into  
19 account deference to the home regulator's regulation  
20 and supervision over the foreign CCPs and avoiding  
21 regulatory overlaps, which may become a barrier for the  
22 foreign CCPs to enter.

1           With respect to the licensing system, requirements  
2     applicable to foreign CCPs are much more lenient  
3     compared to the requirements for domestic CCPs. In  
4     particular, foreign CCPs are exempted from the minimal  
5     capital requirements, nor do we require them to set up  
6     a physical office within Japan.

7           As mentioned in a previous part of my speech, such  
8     a treatment is described as one of the effective  
9     approaches for cross-border regulation in the IOSCO's  
10    report on market fragmentation published in June last  
11    year.

12          On the exemption from licensing, or the exemption  
13    system. We made some revisions in June this year,  
14    reflecting the discussion at the international fora.  
15    In short, while the exemption status used to be  
16    reviewed every six months, this revision -- this time  
17    around, allows the exemptions to be granted without  
18    time limitation, subject to an additional condition  
19    that cooperation arrangements with relevant competent  
20    authorities of the third country have been established.  
21    This change was welcomed by market participants as it  
22    offers stability and predictability for risk management

1 purposes and is expected to facilitate smoother cross-  
2 border transactions going forward.

3 This exemption system was also referred to in  
4 IOSCO's report, "Good practices on processes for  
5 deference," published this June. Currently, U.S. CCPs  
6 provide their CDS and repo clearing services to  
7 Japanese investors under this exemption system. Under  
8 this two-tier system, we granted a license to Eurex in  
9 March this year.

10 In the midst of persisting uncertainties  
11 pertaining to Brexit and COVID-19 pandemic, this new  
12 licensing was well-received by market participants,  
13 especially from a risk mitigation perspective.

14 In the same context, the revision of the exemption  
15 system based on the deference to the foreign CCP's home  
16 jurisdiction was also welcomed by the market  
17 participants as it made it easier for them to use the  
18 foreign clearing system for managing their risks with  
19 added stability.

20 As you can see on taking into account the  
21 discussions at the international fora, our regime for  
22 foreign CCPs has been updated and, subject to home

1 regulator's cooperation, offers enhanced accessibility  
2 to markets. The update aims to provide market  
3 participants with broader choice in terms of risk  
4 management, without compromising financial stability.  
5 We also expect it to stimulate fair competition among  
6 CCPs for the benefit of investors, including  
7 improvement of the quality of services and cost  
8 reduction, among others.

9 Now I would like to briefly touch upon the  
10 recently finalized exempt DCO rule in the U.S. I  
11 understand that upon finalization of the exempt DCO  
12 rule by CFTC last month, Chairman Tarbert has expressed  
13 his support on continued discussion on whether to  
14 permit exempt DCOs to clear certain non-U.S. dollar  
15 denominated swaps for U.S. customers. And I would  
16 expect that such discussion will continue.

17 I believe that our mission as regulators, is to  
18 maintain financial stability and ensure customer  
19 protection while enhancing better market access by  
20 investors through avoidance of harmful market  
21 fragmentation. On that basis we welcome following  
22 consideration by the CFTC on this issue, and its future

1 rulemaking processes.

2 Japan is very much looking forward to working with  
3 CFTC and other authorities to accomplish our mission to  
4 create open --

5 (Unmuted participant interruption.)

6 MR. NAGAOKA: I'll stop here. Thank you very  
7 much.

8 (Unmuted participant interruption.)

9 CHAIR KARNA: As a reminder, if you're not  
10 speaking, could you please put your phones on mute --  
11 we're getting some --

12 MR. NAGAOKA: Thank you. That concludes my  
13 presentation.

14 CHAIR KARNA: If a GMAC member or Commissioner  
15 wishes to speak, please use the WebEx chat icon at the  
16 bottom of your screen and select "All Panelists" as  
17 your option within the drop down menu.

18 Well, to start us off in the presentations we  
19 heard a discussion of how the U.S. and the EU have  
20 approached regulatory deference when it comes to the  
21 supervision of CCPs outside their jurisdictions, as  
22 well as similar feedback from Mr. Nagaoka.

1           In your view, are the varying approaches to  
2 regulatory deference sound? Do they go far enough in  
3 allowing a home country regulator to take the primary  
4 role in supervising the CCPs in their own jurisdiction?  
5 And that's a question for all panelists, as well as  
6 anybody else who has any feedback from the Committee.

7           MR. KLEIN: Chairman Karna, this is Robert Klein  
8 at Citigroup. I have a comment and some questions if I  
9 could be recognized.

10          CHAIR KARNA: Yes, please go ahead, Mr. Klein.

11          MR. KLEIN: Thanks. First of all, I mean in  
12 response -- I was gratified to hear the reminder from  
13 Mr. Nagaoka that as part of the exempt DCO rules, and  
14 as part of Chairman Tarbert's comments on those rules,  
15 there is at least an opportunity for further discussion  
16 around client access to exempt DCOs. And I'd like to  
17 note that Citigroup is certainly aware of significant  
18 interest by U.S. institutional clients in accessing  
19 Japanese yen denominated swaps clearing, in particular  
20 on JSCC. So we would certainly encourage the CFTC, the  
21 JFSA, and the JSCC to continue their dialogue, to see  
22 if there is a practical and safe avenue for permitting

1 U.S. client access to exempt DCOs.

2 So in that spirit if I can continue, I do have a  
3 couple of questions from Mr. Nagaoka.

4 CHAIR KARNA: Yes, please go ahead, Mr. Klein.

5 MR. KLEIN: Okay. I guess, you know, the JSCC has  
6 certainly advocated for U.S. person access to clearing  
7 in Japan under an exempt DCO route. But one of the  
8 factors that's been a concern, as I understand it, is  
9 whether client margin posted by U.S. clients into Japan  
10 would receive protection that is equivalent to the U.S.  
11 protections if that margin were held by JSCC clearing  
12 firms.

13 The JSCC, I think, has asserted that their  
14 segregation model should provide the equivalent or  
15 better protection for clients. And my question is, is  
16 there a way that the JFSA and the CFTC could work  
17 together to get the U.S. regulators comfortable with  
18 how the Japanese client money protection regime works,  
19 and the level of protection that it would afford to  
20 U.S. clients were they to clear on JSCC?

21 MR. NAGAOKA: May I respond?

22 CHAIR KARNA: Yes, please go ahead, Mr. Nagaoka.

1 MR. NAGAOKA: Thank you very much, Mr. Klein, for  
2 your question. It is important to consider protection  
3 of U.S. customers' assets from events such as a failure  
4 of clearing members of an exempt DCO when thinking  
5 about U.S. customers' access to clearing outside the  
6 U.S., and under the Japanese regulation, client margin  
7 is separated at the clearing member level, as well as  
8 CCP level.

9 I think you're familiar with it already, from the  
10 JSCC's explanation, but that's the basics.

11 The regime is complemented and reinforced by  
12 JSCC's relevant rules of enforceability supported by  
13 the Financial Instruments and Exchange Act, that's the  
14 security law in Japan. And compliance with the  
15 requirement for segregation is monitored by the  
16 regulator, ourselves, as well. And the law also  
17 clearly provides for a preferred claim in bankruptcy in  
18 the event of a failure of a clearing member.

19 So, collectively, I think there is sufficient  
20 protection for the U.S. clients.

21 And I will not go into details of our regime here  
22 but we are happy to discuss further with CFTC to help,

1 having a better picture of mutual regulatory and  
2 supervisory frameworks, where it is common and where  
3 there are differences and how those differences could  
4 be filled in.

5 If the private sector has any specific issues  
6 meeting qualification, apart from the questions just,  
7 we had from Mr. Klein, we'll be happy to receive such  
8 inquiries, as well, either directly or through CFTC.  
9 And I would like to repeat that we will be very much  
10 happy to discuss further with CFTC on the qualification  
11 studies needed. Thank you.

12 CHAIR KARNA: Thank you Mr. Nagaoka. Mr. Klein,  
13 do you have any follow up before I go to the next  
14 question?

15 MR. KLEIN: I have one follow up question.

16 In Europe, we've seen one example, Eurex, which  
17 has attained a full DCO registration with the CFTC in  
18 offering essentially parallel clearing models. Again,  
19 a question for Mr. Nagaoka, or others. What's the  
20 biggest hurdle for JFSA or JSCC to support a full JSCC  
21 registration as a DCO as opposed to looking at the  
22 exempt DCO avenue?

1 MR. NAGAOKA: Thank you, Mr. Klein again for a  
2 good question, and I must say that I'm not so familiar  
3 with the two parallel clearing models employed by  
4 Eurex, and cannot actually make any comparisons based  
5 on that.

6 But in general, when we talk about entry of  
7 foreign CCPs, we need to look at differences in the  
8 legal systems of respective jurisdictions with regard  
9 to, for example, segregation of customer assets and  
10 bankruptcy procedures, among others, which form the  
11 basis for supporting the clearing model. And I'll  
12 refrain from making guesses here because we don't  
13 really have a specific picture in front of us, but  
14 going forward if JSCC comes to consider application for  
15 full DCO in the new environment with the new exempt DCO  
16 rule in place, and if the CFTC as a home regulator is  
17 welcome to discuss it, we, the JFSA will be happy to  
18 work with them on the matter and then identify what  
19 actually is the hurdle and how we could actually  
20 overcome those hurdles.

21 So, it is not something that we foresee in the  
22 future, but sorry I cannot really have a clear response

1 at this point. Thank you.

2 CHAIR KARNA: Thank you Mr. Nagaoka. Ms. VedBrat,  
3 do you have some comments to add to the discussion?

4 MS. VEDBRAT: Yes. First of all, I'd like to  
5 thank the panelists for the hard work that they have  
6 done in bringing you know some light to this very  
7 important topic and for the Commission to bringing this  
8 to the GMAC as an important discussion topic.

9 You know, so what I'd like to do is give a little  
10 bit of perspective on, you know, the topics that we  
11 discussed, keeping in mind the end client or the end  
12 investor. As a fiduciary, BlackRock wants to be able  
13 to access the highest quality of CCPs that offer the  
14 best liquidity for our end clients. And to that, you  
15 know, end we do favor policies that enable healthy  
16 competition among high quality CCPs in different  
17 jurisdictions. We're also highly encouraged by the  
18 work that regulators have done to consider common  
19 international standards on CCP supervision, recovery,  
20 and resolution, given the global nature of our, you  
21 know, markets in general.

22 The one piece that, you know, we just want to be

1 able to highlight is that local policies that may  
2 artificially fragment markets, they will potentially  
3 lead to higher costs. And, you know, ultimately, you  
4 know, could lead to greater risk, you know, for  
5 clients. And so, if we could just, you know, keep that  
6 in mind as we are defining local regulations.

7 The other thought that I would like to make a  
8 comment on is our discussion on the alternative  
9 compliance, you know, while we don't necessarily feel  
10 that this will make a material impact on our clearing  
11 strategy, we already have access to many non-U.S.  
12 domiciled CCPs such as LCH and Eurex that are fully  
13 registered and regulated by the CFTC. But as -- you  
14 know, my fellow panelists have highlighted, you know,  
15 access to the JSCC, you know, is something that we all  
16 want to work towards making much more seamless for, you  
17 know, for the U.S. client.

18 You know there's been, you know, migration of  
19 liquidity from LCH to the JSCC CCP which has  
20 essentially, you know, created a basis between, you  
21 know, the offerings on both the CCPs and as a result,  
22 you know, this could create a competitive disadvantage

1 for U.S. customers. You know, and it may also, you  
2 know, make it less efficient to be able to hedge, you  
3 know, the risk.

4 So that's something that, you know, we would we  
5 would encourage, you know, more dialogue, so that we're  
6 able to, you know, make it accessible to the U.S.  
7 customers in a much more meaningful way.

8 And then my last comment is, you know, regarding  
9 the Tier Two Plus designation, that, you know, we may  
10 see some of, you know, some of the CCPs being deemed.  
11 The, you know, there is a little concern that this  
12 could dampen market competition and client choice. You  
13 know, it could actually increase in a different type of  
14 systemic risk, due to like forced migration and  
15 fragmented, you know, market liquidity and, you know,  
16 to some extent, it can also, you know, lead to an  
17 increased cost to the end client due to slipping, you  
18 know, of margin models and potential migration costs.

19 Thank you, back to you.

20 CHAIR KARNA: Thank you very much Ms. VedBrat.

21 Mr. Cutinho, do you have some comments to add to  
22 the discussion?

1 MR. CUTINHO: Yes. Can you hear me?

2 CHAIR KARNA: Yes we can. Thank you.

3 MR. CUTINHO: Okay. I think I just have a  
4 comment, but I don't have any questions.

5 I'd like to take this opportunity to thank the  
6 CFTC and the European Commission for working together  
7 to achieve mutual recognition the second time around,  
8 as well as achieving a level of deference, and I think  
9 this is a balanced approach. We strongly believe in  
10 that, because the laws in each one of the jurisdictions  
11 are never the same. And it can result in significant  
12 conflicts between international regulations and local  
13 laws. So, I think that we've done quite a bit since  
14 the global financial crisis in creating standards  
15 bodies and regulators all around the world, whether  
16 they're prudential regulators as well as market  
17 regulators, work together to establish the standards.

18 So to the extent that each regulation adapts to  
19 standards to the local laws, then deference is the most  
20 practical, pragmatic and the best way moving forward.

21 So thank you and I yield my time.

22 CHAIR KARNA: Thank you very much Mr. Cutinho.

1 Mr. Yamada, do you have any comments to add to the  
2 discussion?

3 MR. YAMADA: Yes, thank you. First off, I wanted  
4 to echo those thanks. We definitely applaud the close  
5 relationships the CFTC has developed over the course of  
6 Chairman Tarbert's tenure here, and believe that, you  
7 know, the progress we've made to really enshrining the  
8 regulatory principles of deference and equivalence have  
9 been tremendous. And clearly are -- the fact that  
10 we've got such strong global presence on the panel here  
11 is evidence of that progress.

12 The one point I would make, particularly around  
13 the topic of global consistency and coordination. We -  
14 - you know, I'm sorry, I lost my train of thought here.

15 The progress is clearly -- or the proposals here  
16 clearly do help enshrine the principles of safety and  
17 soundness of the system. There are still a few points  
18 mentioned by our Citi colleagues, where there's a  
19 little bit of room for improvement here. In particular  
20 -- I'm sorry.

21 CHAIR KARNA: Mr. Yamada, are you still on the  
22 line?

1 (No response.)

2 CHAIR KARNA: Mr. Yamada, did we lose you?

3 (No response)

4 CHAIR KARNA: All right, hopefully we'll get Mr.  
5 Yamada back in a minute, but in the meantime does  
6 anyone else have any questions or comments for our  
7 panelists?

8 COMMISSIONER STUMP: Hi, Angie. This is  
9 Commissioner Stump. I just wanted to ask, among the  
10 committee members if anyone might like to discuss for  
11 the benefit of those who may not be aware or even the  
12 benefit of the Commission, the manner in which we've  
13 distinguished clearing for the clearing requirements  
14 for CCPs abroad with regard to OTC swaps, as opposed to  
15 futures.

16 I just think that might be worthwhile if there's  
17 anyone on the committee who might like to speak to  
18 that. And if not, that's fine too, but since we have a  
19 few minutes here I just thought I would ask if anyone  
20 on the committee might like to address the manner in  
21 which we handle foreign CCP recognition with regard to  
22 clearing futures and how we've handled that in the

1 past.

2 MR. KLEIN: This is Bob Klein, I mean I can  
3 provide a little bit of information. If that would be  
4 helpful.

5 CHAIR KARNA: Yes, that would be great Mr. Klein,  
6 please go ahead.

7 MR. KLEIN: Thank you. And thank you for the  
8 question, Commissioner Stump.

9 There is a distinction, as I'm sure you and the  
10 staff are well aware. In the futures side, there are  
11 two ways that U.S. clients can access non-U.S. clearing  
12 houses. And those two methods have existed for quite  
13 some time now.

14 The first is to establish a clearing relationship  
15 with a U.S. FCM that has a effectively a correspondent  
16 or indirect clearing relationship with a member of the  
17 non-U.S. CCP and clears the client trades through that  
18 correspondent, or indirect clearing relationship, in  
19 which case the U.S. FCM will hold the customer funds  
20 subject to Part 30 of the Commission's rules, which has  
21 a bankruptcy protection and other requirements that are  
22 analogous but not exactly the same as those for

1 segregated funds held for margin on fully regulated  
2 DCOs.

3 The second method is that in some instances, the  
4 Commission has granted what amounts to an equivalency  
5 determination for certain foreign regulators, including  
6 some foreign CCPs, and under those so-called Part 30  
7 determinations, U.S. clients can deal directly with a  
8 non-FCM member of the foreign CCP provided that that  
9 member falls within the Part 30 equivalency  
10 determination and the U.S. client would then establish  
11 a direct relationship with a non-U.S. clearing firm,  
12 post margin to that non-U.S. clearing firm and be fully  
13 subject to the non-U.S. regulatory requirements that  
14 the Commission has deemed to be equivalent.

15 So that's quite a bit different from the cleared  
16 swaps area where effectively there is no permitted  
17 indirect clearing unless all clearing members in the  
18 chain are FCMS and clients cannot access clearing on a  
19 non-U.S. CCP unless that CCP is fully registered as a  
20 DCO, and permits FCMS to become members.

21 COMMISSIONER STUMP: Thank you Mr. Klein.

22 CHAIR KARNA: Yes, thank you very much Mr. Klein.

1           Commissioner Stump, did you have a follow up? I  
2     have a couple of other people who want to provide some  
3     feedback as well.

4           COMMISSIONER STUMP: Well, I do have a follow up,  
5     and Bob you can take this one or you can ask one of the  
6     other clearing members in the group to take it. You've  
7     done a great job of describing the distinctions that  
8     have been made with regard to OTC and listed futures  
9     and the manner in which we as the regulator have  
10    enabled access in those different formats.

11          I would be interested to know if the FCMs who are  
12    engaged in utilizing Part 30 to enable their clients to  
13    access clearinghouses abroad, that are not registered  
14    with the CFTC, they must have some mechanism by which  
15    they disclose to their client that they may or may not  
16    be protected under the U.S. Bankruptcy Code. And while  
17    I'm not making any statements about whether or not they  
18    are protected under the U.S. Bankruptcy Code, I would  
19    be curious as to how FCMs handle that today as they  
20    maybe perhaps disclose to clients what is -- what may  
21    or may not occur in the event of a bankruptcy at a CCP  
22    abroad, on the listed side.

1 MR. KLEIN: This is Bob Klein. I'm happy to take  
2 a shot at that, but would welcome input from other  
3 firms.

4 I think on the listed futures side, again, they're  
5 -- given the fact there are two models, if clients are  
6 documenting with an FCM and using what I'll refer to as  
7 an indirect clearing methodology, there is in fact  
8 disclosure that's provided by FCMs of the relevant  
9 risks in dealing in foreign markets. However, the  
10 client funds are in fact protected under Part 190 of  
11 the Bankruptcy Code, they're just protected as what are  
12 referred to as secured funds rather than segregated  
13 funds.

14 Where the client chooses to deal directly with a  
15 non-U.S. firm that is a member of the CCP in reliance  
16 on a Part 30 equivalency determination, that disclosure  
17 is governed by the relevant rules of the local markets.  
18 And I think it varies from case-to-case and clients,  
19 you know, have to evaluate what disclosures they're  
20 getting and what kind of, you know, what kind of  
21 information they feel they need.

22 But I'm happy to hear comments from other clearing

1 firms.

2 MS. CHIODI: Hi, this is Maria Chiodi. If I may  
3 join Bob?

4 CHAIR KARNA: Yes, please go ahead, Ms. Chiodi.

5 MS. CHIODI: So on top of that, back in 2014-ish  
6 or so, the CFTC promulgated the enhanced profit  
7 protection rules. So to bolster some of the  
8 protections for Part 30 like residual interest, et  
9 cetera. But I think what Bob described was, you know,  
10 again, not commenting on the Bankruptcy Code -- I'm not  
11 a bankruptcy lawyer, you know, if you're dealing with  
12 the FCM, you are within the CFTC's Part 190 and U.S.  
13 Bankruptcy Code as a client. A U.S. client that clears  
14 directly with a non-U.S. clearing firm, then not so  
15 much, you are completely outside of the Bankruptcy  
16 Code, if that make sense, in the U.S. anyway.

17 CHAIR KARNA: Thank you Ms. Chiodi.

18 Ms. VedBrat, do you have some insights on this  
19 question?

20 MS. VEDBRAT: Yes. You know, I just, you know,  
21 wanted to add a little bit from a risk perspective, you  
22 know, as we look at the markets both the, you know, for

1 indirect clearing through our U.S. FCMs. You know,  
2 it's very important to see what type of risk you're  
3 bringing into your clearing relationship.

4 Like for us, you know, what we try to do is, you  
5 know, obviously, we will make sure that the FCMs that  
6 we are engaging with, you know, have a, you know,  
7 robust risk management methodology, but, you know, the  
8 other component of it that, you know, we focus on is  
9 making sure that for markets where we do require  
10 indirect clearing, we encourage our FCMs to have more  
11 than one relationship, you know, for that indirect  
12 clearing, because there are elements of indirect  
13 clearing, that is passed on to the end client, and you  
14 want to be able to avoid a situation where that -- if  
15 that indirect clearer for whatever reason, isn't able  
16 to clear, you're not in a situation that you know  
17 you're unable to either clear your transactions, or de-  
18 risk, you know, if you hold positions, you know,  
19 something that we have observed in the past.

20 That's, you know, something that, you know, the  
21 Commission could take, you know, into consideration is  
22 to have, you know, requirements of more than one

1 indirect relationship.

2 CHAIR KARNA: Thank you Ms. VedBrat.

3 Mr. Cutinho.

4 MR. CUTINHO: I think Bob did a wonderful job of  
5 covering the perspective of members. I have only very  
6 little to add, but as a fact, the CFTC does provide  
7 full recognition and deference when it comes to futures  
8 for foreign boards of trade, as well. So there is no  
9 registration required for the underlying clearing  
10 organization, as long as it belongs to a jurisdiction  
11 that the CFTC recognizes as equivalent.

12 And there is a registration, of course, but it's a  
13 different form of registration but it is at contract  
14 market level, and not at the clearing level.

15 CHAIR KARNA: Thank you Mr. Cutinho.

16 Mr. Yamada.

17 MR. YAMADA: Yes, apologies for the glitch  
18 earlier.

19 I would reiterate that it does feel like the FCM  
20 model, which is effectively an omnibus model, does seem  
21 to be an effective and somewhat proven template upon  
22 which we could address many of the concerns that the

1 representative from Japan, and some of the issues that  
2 they were looking into.

3 There is a model for this and it appears to be  
4 somewhat proven, and obviously it worked through the  
5 recent turmoil. So perhaps this would be something for  
6 further investigation, as a potential model for some of  
7 the issues that have been mentioned.

8 CHAIR KARNA: Thank you, Mr. Yamada.

9 Mr. Müller.

10 MR. MÜLLER: Yes, thank you very much. Erik  
11 Müller, Eurex Clearing.

12 I would like to also make a comment if I may.

13 CHAIR KARNA: Yes, please go ahead.

14 MR. MÜLLER: I'd like to also congratulate the  
15 CFTC and the EU Commission for reaching their accord on  
16 this subject matter.

17 I think as pointed out by Sunil, one of our fellow  
18 peers, there is a difference, indeed, in the way we can  
19 register as a foreign board of trade versus the  
20 registration process for OTC IRS clearing that we are a  
21 fully licensed DCO in that area. And that I think is  
22 still -- there's a difference to being a Tier One EU

1 CCP, and obviously the obligations under the full DCO,  
2 certainly, but I think also under the under the  
3 alternative route that is presented today.

4 So I think it's still sort of not a 100 percent  
5 level playing field, but in practice, I think the CFTC  
6 has been very reasonable in effecting the theoretical  
7 rights that there are under the full DCO, so we feel  
8 it's something that in practice we can well live with  
9 and therefore are grateful that these topics could be  
10 resolved in a way acceptable to both jurisdictions. So  
11 for us it's certainly a basis to be able to operate.  
12 That's my first point.

13 The second point I think where further work ought  
14 to be done is, and maybe nothing that the CFTC can  
15 directly help with, but something that's important. If  
16 these non-U.S. CCPs have access to U.S. clients. Then,  
17 of course, the strong preference of these U.S. clients  
18 is also to pledge U.S. collateral, which often comes in  
19 the form of U.S. dollar cash.

20 So the foreign CCPs, even if fully registered as a  
21 DCO, today have no ability to place these funds in the  
22 most secure way, which would be in a Fed account. And

1 that is a route that's available to many of the U.S.  
2 CCPs, but not to the foreign CCPs, and I think in terms  
3 of systemic risk mitigation and stability of global  
4 markets, this would be something to consider for the  
5 future, and I think the CFTC has been helpful in  
6 identifying this point and again it's something for the  
7 broader policy agenda but important.

8 CHAIR KARNA: Thank you very much Mr. Müller.

9 Does anybody else have any final questions or  
10 comments before we move on in our agenda?

11 MR. HORKAN: Yes, this John Horkan from London  
12 Stock Exchange Group, could I add a comment?

13 CHAIR KARNA: Yes, please go ahead Mr. Horkan.

14 MR. HORKAN: Thank you. Thank you for organizing  
15 today and Commissioner Stump for leading the GMAC and  
16 all the Commissioners in the CFTC for really your  
17 guidance and your support, and certainly what I think  
18 all can know is a unprecedented year.

19 As a clearinghouse that is registered directly in  
20 multiple jurisdictions globally, I want to first  
21 applaud the CFTC and the EU on their cross-border  
22 cooperation. I think it's critical, we think it's

1 critical. And the principles that we think should be  
2 supported are ones of deference, reciprocity, and open  
3 access. And we think the goal of all those should be,  
4 you know, safe and efficient markets, and importantly a  
5 level playing field across all jurisdictions for people  
6 to participate in, and ensure the safe functions of the  
7 markets.

8 So I just wanted to add that comment from a  
9 clearinghouse that is directly registered in multiple  
10 jurisdictions and it's important that regulatory  
11 cooperation continues to help the markets perform well.

12 CHAIR KARNA: Great. Thank you very much, Mr.  
13 Horkan.

14 Before we move on to the next item on our agenda,  
15 I'm going to turn it back over to Andree to do an  
16 update on the roll call.

17 MS. GOLDSMITH: Thanks Angie, just wanted to note  
18 several GMAC members who are present and on the call,  
19 but who we could not hear during the original roll  
20 call. So, present on the call are Ted Backer from  
21 Morgan Stanley; Clive Christison, BP; Joe Cisewski,  
22 Better Markets; Jim Colby, Coalition for Derivatives

1 End-Users; Gerry Corcoran, R.J. O'Brien and Associates;  
2 Sunil Cutinho, CME Clearing; Adam Kansler, IHS Market;  
3 Agnes Koh, Singapore Exchange Limited; Murray  
4 Pozmanter, DTCC; and Thane Twiggs, Cargill Risk  
5 Management.

6 Thanks Angie, go ahead.

7 CHAIR KARNA: Thank you very much. We will now  
8 move on to the second agenda item for this morning,  
9 which is a series of presentations on the impact of the  
10 coronavirus pandemic on global clearing. We will start  
11 with a presentation from Nick Rustad, Chairman of the  
12 FIA Board of Directors. Please go ahead, Mr. Rustad.

13 MR. RUSTAD: Hello, can everybody hear me okay?

14 CHAIR KARNA: Yes, we can. Thank you.

15 MR. RUSTAD: Excellent. Thank you. And thank you  
16 Commissioner Stump for the opportunity to speak today,  
17 and to the Commissioners and GMAC members in  
18 attendance. For those who do not know me, my name is  
19 Nick Rustad, and I'm Chairman of the Board of Directors  
20 of the Futures Industry Association, but I'm also Head  
21 of JP Morgan's Derivatives Clearing Business.

22 If we can move on to the first slide, please.

1           At the end of October, the FIA issued a paper  
2           providing a clearing member view of the March  
3           volatility in clearing. I'll be summarizing much of  
4           that paper in my remarks today. The review was global  
5           and not targeted at any one jurisdiction. Not all CCPs  
6           had the same issues and some already have in place some  
7           of the recommendations it made.

8           In March, we saw historic volatility outpacing  
9           even the volatility seen during the 2008 crisis. The  
10          good news is that the cleared derivatives market  
11          withstood the shock. In fact, central clearing and  
12          other post-crisis reforms helped ensure mitigation of  
13          credit risk and improve counterparty risk management.  
14          CCPs remained genuinely resilient, both from an  
15          operational and technological perspective.

16          But March did provide a real world stress test,  
17          and allowed us to see if there's any room for  
18          improvement. In our opinion, there is.

19          The crisis exposed significant unintended  
20          consequences in some CCPs' initial margin models,  
21          particularly for exchange-rated derivatives. They can  
22          be summarized into three areas. The procyclicality of

1 CCP margin requirements contributed to the overall  
2 level of stress in financial markets, the steep and  
3 rapid increases in CCP initial margin requirements  
4 created funding pressures on FCMs and their clients,  
5 and unscheduled intraday margin calls are hard to  
6 predict and sometimes not transparent, making it hard  
7 to plan for in advance.

8 A number of regulators and global standard setting  
9 bodies have issued reports on the March volatility  
10 which touched on this subject. Most recently, the FSB  
11 put out a report on the March market turmoil which  
12 noted that regulators will undertake further work on  
13 margin frameworks in 2021, which we welcome, and we  
14 look forward to engaging on. We hope the FIA's work  
15 can contribute to these efforts.

16 I thought it'd be helpful to start with a quick  
17 review of what happened during the spring volatility.  
18 FIA used data from CPMI-IOSCO's quarterly public  
19 quantitative disclosures from nine CCPs to estimate the  
20 impact. Four are based in the U.S., four in Europe,  
21 and one in Japan. These nine CCPs collected a detailed  
22 wide range of contracts in both OTC and ETD markets

1 across interest rates, equities, foreign exchange,  
2 credits and commodities. The aggregate amounts of  
3 initial margin at these nine CCPs rose from \$563  
4 billion at year-end to \$833 billion at the end of the  
5 first quarter.

6 This data is only reported quarterly, but that's a  
7 48 percent jump in margin during the first three months  
8 of 2020. Next slide please.

9 This data is presented graphically on this slide.  
10 You can easily see the jump in initial margin at the  
11 end of Q1. A quick note on the data. The time series  
12 begins in 2015, because this is when CCPs began  
13 publishing this data. We do not have comparable data  
14 from the global financial crisis of 2008.

15 Next slide please.

16 This chart is based on the same data as a previous  
17 slide, but we've presented the data in a different way  
18 so that you can see the variations across CCPs. The  
19 chart shows the total level of initial margin for the  
20 three most recent quarters available, taking a more  
21 granular view shows that the increase in initial margin  
22 levels varied across CCPs, which reflects the

1 differences in asset classes, contract types, and  
2 margin models.

3 Next slide please.

4 This chart is based on data published monthly by  
5 the CFTC on the total amount of customer funds held in  
6 futures accounts of futures commission merchants  
7 regulated by the CFTC. As the chart shows, the amount  
8 of customer funds hit a record in March 2020. In fact,  
9 the increase in that one month was more than \$100  
10 billion.

11 That increase is the single largest month increase  
12 in the history of this data and exceeded even the  
13 increase in customer funds during the financial crisis  
14 of 2008. The size of this increase shows of pressure  
15 on customers to locate large amounts of additional  
16 collateral and deposit with their FCMs and to do so in  
17 an unusually short period of time.

18 Just a quick note on this data. The amount shown  
19 here is the required segregated funds as defined by the  
20 CFTC, and do not include excess deposits from the FCMs.

21 Next slide please.

22 A common question is whether this increase in

1 margin held at CCPs is caused by an increase in client  
2 positions or open interest, or by the scale of increase  
3 in individual contract levels of margin. Based on the  
4 information we have available I would argue it is  
5 likely to be the latter.

6 Slide seven shows monthly aggregate open interest  
7 and the increases in positions is barely noticeable on  
8 this chart in the way that it was on the previous  
9 charts showing margin. In fact, positions with open  
10 interest remained fairly constant for the first half of  
11 the year.

12 Next slide please.

13 In my opening statement I highlighted the FIA  
14 review was global, and the next few slides will show  
15 this issue is not limited to a single jurisdiction,  
16 CCP, or asset class.

17 Let's start with the equity indices with the three  
18 benchmark contracts in the U.S., Europe, and Japan.

19 The S&P, the level of margin almost doubled from  
20 \$6,600 per contract to \$12,000 a contract. The  
21 Eurostoxx 50, it did more than double. However, this  
22 does not tell the full story. What these numbers

1 disguise is that the value of the contract is falling  
2 at the same time. If you want to look at margin as a  
3 percentage of the value of the contract, the S&P went  
4 from 3.9 percent to almost 11 percent. The Eurostoxx  
5 50 went from 6.9 percent to almost 20 percent of  
6 notional.

7 If we scan through the next couple of slides you  
8 see that this is not just limited to equities. The  
9 next few charts show similar trends in fixed income and  
10 in commodities, where CCPs needed to adjust margin  
11 models to reflect the possibility that the price of oil  
12 could, and did, go negative.

13 Next slide please.

14 So why do individual contract margin rates, and by  
15 extension the aggregate amounts of margin held, have to  
16 increase at the rate it did? Quite simply, it's  
17 because the levels of margin set were inadequate for  
18 the market environment we found ourselves in.

19 This slide shows the numbers of futures contracts  
20 where the daily move exceeded the margin held against  
21 that contract. To use the example of the S&P 500  
22 contract earlier, if the margin was 3.9 percent, then

1 we are classifying a breach as a one day move greater  
2 than 3.9 percent. You can see how the number of margin  
3 breaches reported by the nine major clearing houses  
4 varies from 3,106 during the 12 months ending in Q4, to  
5 6,640 in the 12 months ending Q1 2020.

6 In other words, the number of margin breaches that  
7 occurred in Q1 alone was greater than for the total for  
8 the 12 preceding months. This is one of the reasons  
9 why we refer to the first half of 2020 as a stress test  
10 of the clearing system. When there are shortfalls in  
11 initial margin, the first line of defense has been  
12 breached. If a client can not meet the resulting  
13 margin call within a short period of time, we begin  
14 moving through the waterfall of the default management  
15 process.

16 Each clearing member is responsible for the risk  
17 they bring, but that does not diminish the need to  
18 ensure that appropriate levels of margin set for the  
19 industry as a whole are appropriate. Clearing members  
20 manage risk client-by-client, clearing houses manage  
21 the risk of the broader market. It is very important  
22 to note that margin models are not designed and should

1 not be designed to cover all market movements in all  
2 market scenarios.

3 Margins are calculated at a 99 percent confidence  
4 interval. In plain English, that means we should  
5 expect two to three margin breaches per contract per  
6 year. Of course, there were more breaches than that  
7 during March.

8 Before I finish this review of what happened and  
9 move on to suggestions for improvement, it is worth  
10 reflecting on one more thing. All of the examples I've  
11 given refer to listed derivatives. I've barely  
12 mentioned how OTC market models behaved in this period.  
13 This is because breaches were larger and more frequent  
14 for exchange-rated derivative contracts relative to  
15 over the counter contracts, and at CCPs with lower  
16 margin periods of risk, with lower confidence levels,  
17 that controlled procyclicality by capping margin  
18 increases, and that clear less liquid contracts.

19 The five-day regulatory minimum MPOR for OTC  
20 contracts means that OTC margins remained more stable.  
21 In contrast, exchange-traded derivatives margin started  
22 from a lower base; hence, they are subject to a higher

1 and more procyclical margin increase under the stressed  
2 conditions.

3 The next two slides try to reflect this  
4 graphically by showing the upper and lower boundaries  
5 of margin for an OTC derivative, and its equivalent  
6 listed derivative contract, in this case, a 10-year  
7 interest rate swap and a 10-year U.S. Treasury bond  
8 future. Both happen to have margins set by the same  
9 clearing house.

10 Our purpose is to show the differences in how  
11 margin models treat OTC and ETD products that present  
12 very similar levels of risk.

13 We move on to the next slide, to the bond future.

14 The green line at the top, and the dark gray line  
15 at the bottom, and mirror images of each other. We  
16 include both in our analysis to show a maximum coverage  
17 for both losses and gains, the scatterplot in the  
18 middle shows the mark-to-market change in contract  
19 value on a daily basis from mid-February to mid-  
20 December.

21 As you can see, on the U.S. Treasury futures chart  
22 there are several blue dots outside the boundaries of

1 margin coverage. These are margin breaches that took  
2 place in February/March. You can also see the adjusted  
3 margin was -- sorry, you also see the move and adjusted  
4 margin requirement was very rapid during that period,  
5 and continued to keep the requirements at a relatively  
6 high level at the start of the year.

7 If we flick back to the same analysis of the 10-  
8 year interest rate swaps, you can see the initial  
9 margin requirement was much higher relative to daily  
10 P&L, and there were no margin breaches.

11 It is clear the amount of margin required for  
12 over-the-counter interest rate swaps is much higher  
13 than ETD. One reason is the difference in the margin  
14 period of risk for OTC is generally five-days compared  
15 to two-days, one-to-two days for the exchange-rated  
16 derivatives. This is only one example. But having a  
17 look at the recalibration and margin models is one  
18 option to look at.

19 Slide 14, which I'll skip over in the interest of  
20 time -- go one more up please. Thank you. Shows this  
21 across a number of contracts, but as I said, I'll move  
22 on to the margin of time.

1           If we move on to Slide 15, thank you. Initial  
2 margin undoubtedly should have risen during this period  
3 of time and the FIA is not arguing at all about this.  
4 CCPs must increase margin to cover risk. However, we  
5 do believe the level of margin increases during the  
6 spring volatility was too great, and therefore margin  
7 either started too low or ended up too high.

8           One solution to these steep increases in margin  
9 could be by setting appropriate floors, so margin  
10 doesn't fall too low during quieter times. Multiple  
11 floors operate the same, and we believe this situation  
12 calls for review of floor methodologies to see if they  
13 are robust or could be strengthened.

14           Next slide please.

15           Of course, we understand that margin is not  
16 intended to cover 100 percent of the risk, so a balance  
17 must be struck but in setting the floors. I've just  
18 discussed how different products and jurisdictions have  
19 different standards for margin periods of risk and  
20 confidence levels.

21           We recommend a principles-based approach. The  
22 look back period should be long enough to include a

1 variety of market environments and always include  
2 periods of significant market stress. Floors should be  
3 calibrated for specific contracts and asset classes.  
4 Margins should be calibrated based on analysis of the  
5 absolute and percentage returns in order to set floors  
6 that are both adequate in low and high price regimes.

7 We acknowledge this could lead to an increase in  
8 the level of margin funding during BAU market  
9 conditions and recognize that there is a balance to be  
10 struck to ensure that incentives to clear are not  
11 diminished. But arguably these costs exist today and  
12 are currently covered through large default funds,  
13 which coincidentally saw a decrease as margin levels  
14 increased during the crisis.

15 Incentives to clear already exist in part due to  
16 the levels of margin required under the uncleared  
17 margin rules brought in post-2008. Next slide please.

18 We also strongly recommend that margin frameworks  
19 must be back-tested to test the potential for large and  
20 sudden increases in margin requirements. This testing  
21 would be in addition to the back-testing margin  
22 sufficiency that is done now. This means defining a

1 maximum rate of change over a predefined period of time  
2 and then testing whether a stress test would cause the  
3 margin to exceed those defined parameters. If it does,  
4 the margin framework should be adjusted.

5 The frame -- next slide. The framework for  
6 intraday call should also be revisited. Margin which  
7 is collected intraday can be both initial margin and  
8 variation margin, but tends to typically be variation  
9 margin. CCPs must be able to call for additional funds  
10 intraday to maintain sufficient collateral. However,  
11 it's important to note that intraday calls can increase  
12 funding pressures and therefore clearing members keep  
13 buffers for funding needs intraday.

14 CCP requests funding within 60 minutes and  
15 clearing members usually fund those without immediately  
16 requesting collateral from clients. In many cases,  
17 clients are based on the opposite side of the world and  
18 this would be highly impractical. At some point during  
19 the spring volatility, members were called more than  
20 six times for intraday margin.

21 For OTC derivatives, any intraday margin calls  
22 require the clearing member to run a residual interest

1 calculation before we can release funds to the  
2 clearinghouse. This is a tight turnaround time.

3 Although CCPs can share high level details around  
4 their IM methodologies, there is not full transparency.  
5 FCMs cannot replicate IM moves with precision, so the  
6 transparency is at best described as partial. FCMs can  
7 only approximate funding requirements. Some CCPs use  
8 ad hoc calls more routinely, but they should only be  
9 used during severe market moves.

10 CCPs call for intraday losses but do not pay out  
11 gains, creating liquidity stress. This variation  
12 margin is particularly a challenge if a market were to  
13 reverse intraday as you get no benefits from the margin  
14 has already been posted. Variation margin should be  
15 zero sum across the system, and therefore should not  
16 impact overall market liquidity. However, practice  
17 with some CCPs and not paying out intraday gains whilst  
18 calling for losses invalidates this construct and adds  
19 strain to the system at precisely the time unnecessary  
20 strain is most unwanted.

21 Some calls are required to be met in cash and come  
22 late in the day. Regulatory requirements around

1 holding excess and bank diversification rules means  
2 that it's hard to pull funds back from safe sources.  
3 Some CCPs do not allow intraday funding to be applied  
4 against an end-of-day requirement, resulting in further  
5 double funding. Failure to recognize end-of-day  
6 amounts that have essentially been prepaid seems a  
7 technical oversight that can be easily addressed and  
8 would help alleviate unnecessary strain of the system.

9 Last slide please.

10 Therefore, we offer some specific solutions to  
11 these issues. We recommend the following best  
12 practices around intraday calls including routine  
13 intraday calls to be made at the same time every day.  
14 This would be easier operationally for what is  
15 currently a very manual process. Calls should clearly  
16 separate initial margin and variation margin. This  
17 would allow clearing members to cover intraday initial  
18 margin calls with non-cash collateral.

19 Ad hoc intraday calls should be used on a limited  
20 basis, perhaps once a clearing member's specific  
21 threshold has been exceeded, and CCPs should provide  
22 full transparency of triggers for calls.

1           In conclusion, we look forward to dialogues such  
2           as this one with Commissioner Stump, and equivalent  
3           meetings, such as the one organized today. We look  
4           forward to discussing what should be best practices  
5           around CCP margin to lessen procyclical impacts going  
6           forward. Thank you.

7           CHAIR KARNA: Thank you Mr. Rustad.

8           The second presentation will be from Sean Downey,  
9           Executive Director of Clearing, Risk, and Capital  
10          Policy at CME Group. Please go ahead, Mr. Downey.

11          MR. DOWNEY: Well, thank you and I just want to  
12          confirm that you can hear me.

13          CHAIR KARNA: We can, thank you.

14          MR. DOWNEY: Great. So first I wanted to thank  
15          the Commissioners and CFTC staff in particular,  
16          Commissioner Stump for hosting this event, and Andree  
17          Goldsmith for coordinating the meeting. I know this  
18          has been a difficult year for everyone. I'm honored to  
19          have the chance to present on this important topic.

20          So before I get into the slides, I just wanted to  
21          make three quick points on some views on the overall  
22          year that we had. So first, I'd like to say that CME

1 Clearing certainly agrees with the notion that central  
2 clearing performed very well during the COVID pandemic  
3 stress, just as it has historically during past stress.

4 Also I wanted to note, when you think about  
5 antiprocyclical of CCP margins, the goal of  
6 antiprocyclical measures is to mitigate the size and  
7 the speed of increases in margin in response to  
8 changing market conditions, with the goal being to  
9 avoid causing or exacerbating financial instability.

10 Based on this, we are going to focus the majority,  
11 although not exclusively, on the aggregate margin  
12 changes, and our portfolio coverage levels throughout  
13 this time period.

14 Finally, I just want to note that this has been  
15 noted in the past but this is a once in a century  
16 pandemic. I think most of us who are on this call,  
17 probably didn't experience the 1918 Spanish flu. So it  
18 is a quite an event in which the vast majority of the  
19 world economy shut down, and based on World Bank  
20 estimates the global economy suffered the largest GDP  
21 decline since at least World War Two.

22 So now just moving on to the first slide.

1           This just gives a little bit of context on the  
2 moves that we saw in our markets at a product level to  
3 reinforce the severity of what happened. As you can  
4 see, Treasury yields suffered their largest daily  
5 percent shifts ever. On the equity front, the nine  
6 largest dollar moves in the history of the S&P 500, the  
7 10 largest in the Dow, and the seven largest in the  
8 NASDAQ occurred in March and April 2020.

9           And finally, crude oil saw the two largest dollar  
10 percentage price moves, ever.

11           But we think that's important in context as we  
12 continue to discuss the response of CCPs to the COVID  
13 pandemic and the stress that's associated. Moving on  
14 to the next slide, please.

15           Despite this historic volatility, CME Clearing and  
16 obviously I'll be focusing on CME Clearing, did not  
17 make any changes to its BAU approach to managing risk.  
18 Very importantly, one of the things that CME did not  
19 change is the fact that anytime we made an increase to  
20 margins, we gave our members and the market at least 24  
21 hours notice before those increases became effective.

22           Now, what that allows participants to do is to

1 rebalance their portfolio as they see fit in response  
2 to the margin changes and gives them the chance to take  
3 actions as necessary to address any funding  
4 requirements that they might have. Also, I just want  
5 you to know that there were no ad hoc margin cycles run  
6 by CME throughout this time. As many of you likely  
7 know, CME collects and pays out variation margin twice  
8 a day for its base offering. So it's a -- it's an  
9 exchange-traded derivatives offering. And once a day  
10 for interest rates swaps, and on the initial margin  
11 front we collect initial margin twice a day for  
12 exchange-traded derivatives and once a day for interest  
13 rate swaps.

14 Now, a couple of important points here, and one in  
15 particular, is that if you compare, and we'll see more  
16 of this on the next slide, the variation flows to the  
17 initial margin adjustments, you'll see that the price  
18 volatility significantly exceeded any margin changes.  
19 And I would also note that from a portfolio coverage  
20 perspective, we covered 99.97 percent in base and 99.87  
21 percent in IRS, which significantly exceeds the  
22 regulatory expectations.

1 Moving to the next slide.

2 So what this shows is throughout the March and  
3 April time period which are the two -- which is the  
4 most volatile two months of this entire stress, the  
5 average day-over-day margin change, and the maximum  
6 day-over-day margin change as compared to margin-on-  
7 deposit. As you will see, it's approximately one  
8 percent on average, and 6.47 percent, approximately 6.5  
9 percent, at a max level.

10 So while there has been some discussion about the  
11 size of margin increases over longer time frames, it's  
12 important to note that on a day-over-day basis, the  
13 margin increases were relatively mitigated, both from a  
14 match perspective and on average.

15 Moving on to the next slide please.

16 And this is an important comparison. We've had a  
17 lot of discussions here about the level of stress and  
18 the level of price moves that were observed during the  
19 COVID pandemic. And what this compares is the max  
20 mark-to-market or variation flow in a single day to the  
21 max initial margin change with one explanatory note  
22 that we're actually showing the initial margin, at

1 least for exchange-traded derivatives, on a net basis.

2 Now, the reason we do that is variation is paid  
3 and collected on a net basis whereas customer gross  
4 margin has been collected in the U.S. since, I believe,  
5 2012 for both exchange-traded derivatives and swaps.

6 So in order to have an apples-to-apples comparison, we  
7 are removing the impact of gross margin on the customer  
8 level for exchange-traded derivatives in this  
9 comparison. And so, what you see is that effectively,  
10 the price moves, which are reflected by variation, are  
11 almost three times as great as the maximum initial  
12 margin change.

13 And so, what that demonstrates is that the goal of  
14 having antipro-cyclical margins that will mitigate  
15 margin increases is accomplished by the fact that  
16 almost two-thirds of the price move is not needed to be  
17 addressed in initial margin changes.

18 So we think this is an important slide to  
19 demonstrate the difference between the price moves and  
20 the initial margin changes at CME Clearing.

21 Next slide please.

22 Now this, I think, has taken on a bit more

1 importance as we discuss the implications of open  
2 interest for margin changes of CCPs. I know that in  
3 the previous presentation, there was a discussion about  
4 the fact that open interest did not materially change.  
5 I think what's important to point out on this slide is  
6 in particular the E-Mini S&P. That is consistently  
7 representing the largest margin for any single product  
8 at CME Clearing. And in that case, the open interest  
9 increased by 32 percent from the end of January to the  
10 end of March.

11 Now this 32 percent change resulted in  
12 approximately \$68 billion in initial margin for the E-  
13 Mini S&P. So while the overall increase in open  
14 interest was a little over 8 percent, so still an  
15 increase, the E-Mini which is by far the largest  
16 contract from a margin on deposit perspective,  
17 increased 32 percent, which effectively means that a  
18 significant portion of the margin increase, or at least  
19 the material portion, was driven by an increase in open  
20 interest.

21 You can also see that a significant increase in  
22 open interest occurred in the WTI contract as well.

1           So just to clarify, those contracts that represent  
2   large portions of initial margin on deposit, in  
3   particular the S&P, did have a significant increase in  
4   open interest between the end of December 2019 and the  
5   end of March 2020.

6           Next slide please.

7           So this is just the slide -- and I'll cover this  
8   relatively quickly, but I just wanted to note that we  
9   at CME Clearing do compare the antiproyclicality of  
10   our margins to some of the global standards for  
11   antiproyclicality. And as you can see, the 1-day and  
12   30-day increase in initial margins at CME were lower  
13   than the increases using one of the standardized tools  
14   for antiproyclicality and margin. So we do believe  
15   that targeted antiprocyclical measures are important in  
16   CCP risk management.

17          Next slide please.

18          So the next four slides -- and I'm going to go  
19   through them relatively quickly, are using the same  
20   unit of measure and comparing the price changes in four  
21   different products to the initial margin changes. And  
22   as you can see, there was repeated stress, significant

1 price changes, and relative to the changes in initial  
2 margin they were significant, and very much larger than  
3 those initial margin swings, so go on to the next  
4 slide.

5 So you see the same thing here. Larger price  
6 moves than initial margin changes by an order of  
7 magnitude.

8 Next slide. Same thing here. Same theme, I will  
9 not spend too much time. Next slide please.

10 And again on COMEX Gold. The same theme is that  
11 the price changes dwarfed the changes in initial  
12 margin. So now moving on to the next slide please.

13 So, we provided this slide because there has been  
14 some discussion, you know, at a general level, about  
15 the implications of clearing on overall funding in  
16 other markets, and what actions were taken by  
17 participants in response. And so, this is  
18 demonstrating the excess margin on deposit at CME.

19 And as you can see, there was a drawdown of that  
20 excess margin on deposit which we would expect during  
21 such an environment, but it very quickly returned to  
22 previous levels. So while there was a short and

1 relatively sharp drawdown, the excess margin did not  
2 take long to return to the six or seven percent average  
3 that we had seen prior to the COVID stress.

4 Moving on to the next slide please.

5 This is a very important slide, I think, from our  
6 perspective. In particular, we've seen lots of  
7 discussion about dash-for-cash, and a lot of  
8 policymakers considered the implications of the dash-  
9 for-cash on a variety of financial credit markets  
10 within the financial system.

11 And so, this is obviously only what we've observed  
12 at CME Clearing. But, from our perspective and the  
13 data that we have, we actually saw a significant  
14 increase in cash at CME Clearing, and to note, much  
15 more significant than any increase in margins. Margins  
16 went from approximately \$145 to \$150 billion to around  
17 \$250 billion at the peak.

18 In contrast, the cash we have on deposit went from  
19 the high \$20 billion range to over \$90 billion. So it  
20 more than tripled. And that has maintained throughout  
21 the period.

22 So one of the points I think that we wanted to

1 make here, is that at least from the data that we have,  
2 and what we have observed in our markets, there has not  
3 been a dash-for-cash and it's important to note that  
4 the clearing members could have met their obligations  
5 in U.S. Treasuries very easily if they needed cash for  
6 other purposes.

7 We don't have any cash minimums, I know that some  
8 CCPs do but to be very clear, we don't. So, the  
9 inclusion of this cash or the deposit of cash with CME  
10 Clearing is very much voluntary in nature and it could  
11 have been substituted for other collateral types, in  
12 particular U.S. Treasuries.

13 So, I think that is the last slide in the  
14 presentation. And so, with that I will give up my  
15 time. Wish everyone happy holidays and thank everyone  
16 again for the opportunity to present and cover on this  
17 important topic. Thank you.

18 CHAIR KARNA: Thank you very much Mr. Downey.

19 The third presentation will be from Dmitriy Senko,  
20 Chief Risk Officer and member of the Executive Board at  
21 Eurex Clearing. Please go ahead, Mr. Senko.

22 MR. SENKO: Hello, can you hear me well?

1 CHAIR KARNA: Yes, we can. Thank you very much.

2 MR. SENKO: Okay, perfect. Well, thank you very  
3 much for the possibility to contribute today, and I  
4 will present some facts and figures how Eurex Clearing  
5 went through the crisis this year but also will provide  
6 some perspective of Eurex Clearing on the industry  
7 discussion that we also have today.

8 So if you can move to the next slide, please. The  
9 next one. Next. So our thinking -- yeah, I think  
10 let's start with this one.

11 Our thinking is that 2020 was an important year  
12 where the financial architecture which was designed and  
13 has been implemented since 2009, was put into a big  
14 test, and it's worth looking into how it behaved  
15 throughout the crisis.

16 So again, the key logic of central clearing is if  
17 it's stripped down to a very few bullets, it's about  
18 collateralizing of exposures. And if we follow  
19 analogous logic, collateralizing exposures what could  
20 change there over time, the collateral which is  
21 required is in a way a function of what happens with  
22 portfolio, what happens on the market as markets regime

1 changes, and what happens with the risk parameters that  
2 are used to quantify exposures.

3 And in all these three drivers, we observed  
4 changes, understandably, due to the happening on the  
5 market. But let's keep it in mind collateralization of  
6 exposure is essential in the logic of a clearinghouse.

7 Let's go to the next slide, please. This next  
8 one.

9 So that's the chart on the intraday margin calls  
10 that were performed in the months during the crisis and  
11 some months before and some months after. The number  
12 of margin calls was higher, much higher than usual and  
13 the amounts that were collected were much higher. And  
14 this is related to the situation with market moves were  
15 pretty large back in the day, as we have seen now in a  
16 few presentations on that one.

17 And currently, as we see it continuously see that  
18 intraday margin calls are back to normal levels.  
19 That's one piece on how Eurex Clearing performed during  
20 the crisis. Now, next slide. And, yeah, the next one.  
21 Please.

22 More facts and figures. That's the view on the

1 total margins, that over time that Eurex Clearing  
2 collected. And here we see before the crisis we've  
3 been at the levels of around 60 billion and into the  
4 crisis, the margin, the total margins collected peaked  
5 at around 110 billion, so almost doubled. And since  
6 then, it is gradually declining, and consistent with  
7 the observation that volatility regime is getting back  
8 to normal, not completely back to pre-crisis levels.  
9 We have seen, for example, a small spike after the U.S.  
10 presidential elections due to vaccine announcements  
11 that is visible here, so volatility picked it up again.  
12 But overall, we are now at around 70 billion margins.

13 If you look at the table below, you will see the  
14 breakdown into cash, non-cash and a few metrics there.  
15 So, when talking about the -- it's important point when  
16 we later talk about intraday margin calls mechanics, we  
17 also accept non-cash and it's a pretty material portion  
18 and remained pretty stable throughout the crisis at  
19 around, almost 50-50 of cash and non-cash.

20 If you can move to the next slide please.

21 That's now a deep dive into a product level back-  
22 test. We have seen similar charts before, so earlier

1 today that's our benchmark product Eurostoxx 50, index  
2 product and the chart outline, we see here margin  
3 levels, both for long and short-term -- long and short  
4 contracts, margins with and without floors, and the  
5 blue dots are the profit loss.

6 Here, taking a three-day view, because our holding  
7 period -- margin period of risk assumption is three-  
8 days for this type of contract. Here we see at the  
9 beginning of the crisis model we started into the  
10 crisis at the levels of around seven percent, if I take  
11 the long contracts and gradually it increased now first  
12 to 17th and to 20, and now it's gradually decreasing  
13 with some increase again after the vaccine related news  
14 in November.

15 So, most of the back-testing breaches were  
16 happening at the beginning of the crisis where the  
17 margins were too low. And so, one is to observe how  
18 big is the breach and another one, it's interesting and  
19 if you go here, the margin reacts a few days  
20 afterwards, by increasing the levels of margins to  
21 adapt to the new level of volatility.

22 This adaptation is done automatically in our

1 model. So, our model is a formula, which has -- takes  
2 as inputs the level of volatility. And basically,  
3 starting from there it's there is no manual  
4 interactions, interventions. We haven't adapted any  
5 formula or any parameter within the formula throughout  
6 the crisis. So all, what's happened -- happens based  
7 on the predefined formula which was tested before the  
8 crisis when we introduced the model, like a few years  
9 ago.

10 The parameters are regularly recalibrated usually,  
11 but throughout this period we didn't have to adapt.  
12 So, now, pausing here and talking about transparency  
13 and predictability.

14 There are few layers of predictability. One is  
15 when the model is completely transparent, the formula  
16 is there. Understandably, we don't know what the  
17 market move will be, but if someone knows what is the  
18 market move he can use the formula and calculate by  
19 himself, what would be the response of the margin.

20 So that's kind of the way we are approaching the  
21 margin models, and that's to be seen in contrast, maybe  
22 other margin models where the formula is not known, and

1 the margin is adapted based on some less transparent  
2 criteria.

3 Another point of note here: floor and without  
4 floors, if look at the beginning of the chart these  
5 dotted lines are the -- what margin would have been  
6 without floors. So without floors, we would have  
7 started into the crisis at the level of four to five  
8 percent margins. With floors, we started into seven,  
9 with seven percent level, roughly. And yeah, that  
10 shows how the floor helps to -- the margin not to jump  
11 and not to triple or quadruple, that maybe to produce a  
12 change of only 2.5 if it's looked at this kind of scale  
13 of several months.

14 Okay, let's move to the next slide please. And  
15 next one.

16 So, some reflection to the industry discussion.  
17 Now there are two views possible on what happened and  
18 they are interchangeably mentioned, or a mixture of  
19 those as mentioned in the papers that are being  
20 discussed. One is to say, it seems that the CCPs and  
21 clearing industry worked as designed, as it was  
22 designed in 2009. Another way is to see, to view it in

1 a way with this important data set and in general it's  
2 common sense to look at how things are being done,  
3 understand the current state and potential limitations  
4 of the current state.

5 And to think what could be improved, a common  
6 sense of continuous improvement thinking and more so  
7 given that we have such an interesting year behind us  
8 or still within this year and that's our approach, and  
9 we are happy to participate in this discussion and also  
10 in the industry discussions going forward.

11 Next slide, please.

12 So, our take on the discussion landscape is  
13 outlined here and I will go through a few topics. If  
14 we start with the bottom part, we are on the margin  
15 model. All the topics about margin models we are  
16 pretty much aligned with the FIA paper here on the  
17 floor. So we have stress period floors in place that  
18 go further than 10 years back so we still have the 2008  
19 crisis in there.

20 We have this formula-based approach which is in  
21 terms of predictability is transparent.

22 Now on reactivity, if I talk in the discussion

1 points that are possible or needed. It's actually the  
2 industry discussion should be there and the agreement  
3 should be sought how quick, or how slow margins should  
4 react in a way in a typical model, it's one factor,  
5 index decay factor or half-life parameter which is  
6 usually used and there should be a consensus of how  
7 quickly it should react and starting from there it  
8 could be adapted.

9 It has to be named. Now again continuing with the  
10 trade offs here. That least procyclical model would be  
11 a flat margin, which is in itself is a bad model as  
12 well or a bad properties as well. It usually -- if the  
13 margin doesn't react to changes in market volatility,  
14 usually there are a lot of margin breaches or the  
15 margin it should be set very high, also throughout  
16 periods of very calm markets.

17 So I think consensus and current thinking and in  
18 the modeling of the margins or any risk number is that  
19 there should be some level of reactivity to the  
20 increased volatility on the market.

21 If we go to margin period of risk, we are again  
22 here pretty much aligned. Our margin period of risk

1 setting is educated by our default management process.  
2 So, we have fixed-income derivatives with two-day  
3 periods, trade frequency derivatives with three-day  
4 periods, and for OTC five-day. And then the thinking  
5 is to have margin period of risk set to be enough to be  
6 able to liquidate the portfolios.

7 In terms of trade-offs, I think this has to be  
8 looked at whether one-day is sufficient or whether, and  
9 I think we are here in line with FIA paper that the  
10 thinking of alignment between margin period of risk and  
11 default management is -- yeah, is the principle which  
12 will be applied.

13 On back-testing, we have product and portfolio  
14 level vectors. Here one learning or one trade-off that  
15 we noted in the industry discussion, it makes sense to  
16 compare apples and apples and back-test their margins  
17 of different CCPs against the same one-day PnL, because  
18 PnL is reality and margins are models so compare  
19 different models with the same reality, we should take  
20 away the same reality. It doesn't make sense to back-  
21 test some CCPs against three-day PnLs with a one-day  
22 PnL.

1           Then yeah, the outcomes are biased if we do that,  
2   so proposal is to have aligned back-testing PnL. And  
3   on concentration and liquidity, we have them built into  
4   the model and the question is, again, on the  
5   modalities, should it be really within the initial  
6   margin model, which is updated intraday or there could  
7   be solutions where concentration add-ons are outside  
8   and then updated only once per day or less frequently.

9           So there are design choices -- different design  
10  choices possible.

11          So for IM initial margin model we're pretty much  
12  aligned. Let me quickly run through the intraday  
13  margin call which poses a broader set of topics to  
14  discuss.

15          So, here, it is important to differentiate into  
16  different drivers for intraday margin calls. Three  
17  main drivers are market moves or position change or  
18  margin features. We have seen also from few  
19  presentations today it's most -- well, yeah, two  
20  hypotheses and the position changes. Everyone who  
21  argued here, that it's not so big but market moves is  
22  big and margin features is was argued it's big, but I

1 think it's not in our case. We haven't changed margins  
2 intraday, it's happening overnight, and gradually with  
3 this formula.

4 Market moves, yeah, we think are the biggest ones.

5 Now in terms of timing of the margin calls. It's  
6 -- there are two different possibilities. We have  
7 event-driven margin calls, meaning that we have a risk  
8 model in place which quantifies changes of exposures on  
9 a near real-time basis. So if there is any market move  
10 or any position change, the margin is calculated within  
11 several seconds, and then if shortfall, if  
12 collateralization situation is such that model  
13 requirement is higher than collateral, then it is an  
14 event for -- the case to issue the intraday margin  
15 call.

16 There are operational thresholds in place, but  
17 still it's event driven and the biggest design choices  
18 here are batch driven, scheduled margin calls or event  
19 driven margin calls. Here the clear trade-off is  
20 operational facilitation of clear times and clear  
21 batches versus yeah, if the market move is happening  
22 between the batches then there is uncovered exposure to

1 CCP, which remains uncovered until the next batch.

2 In terms of covering by non-cash, we allow the  
3 intraday margin calls to be covered by non-cash, so  
4 even if it's driven by the change in price, which on  
5 the other side prevents us from paying out cash to say,  
6 the losers and gainers from the market move, from those  
7 who are losing money we can accept intraday non-cash  
8 but this means we cannot pay out cash to better than  
9 those who are gaining.

10 So, there is a symmetry, driven by the situation  
11 that we allow non-cash intraday, and the -- another  
12 design choice would be to really introduce pay-in/pay-  
13 out during the day, which has to be evaluated --  
14 discussed. It has its own downsides with the  
15 operational burden of paying in and paying out, several  
16 times of day in all the currencies that are now being  
17 cleared in all the product currencies consistently.

18 And (inaudible) level way and in terms of  
19 predictability, I think one type in terms of solution  
20 space, there is a timing predictability and amount  
21 predictability remains unknown because the amount is  
22 usually, we saw the biggest driver is market change and

1 markets no one can predict.

2 So, but as a small improvement of the operational  
3 and transparency on the way reports are possible, we  
4 have the reports -- every 10 minutes we produce the  
5 reports that outline what is the collateralization  
6 situation, what is the margin, what is collateral. So  
7 based on this report, it could be an early signal, or  
8 previous to an early warning and early planning for  
9 what could happen soon if the market movements are  
10 linked. So, yeah, I think that was good.

11 Let's move to the next slide.

12 And on margin model, again I think there is a zone  
13 of potential agreement. Also from what I heard today,  
14 I think, everyone had a slide on back-testing and how  
15 margins performed here is our proposal, but to progress  
16 in any direction of discussion, a first step would be a  
17 fact-based analysis of the data set for 2020 where, you  
18 know, all the CCPs have the product level margins and  
19 behavior. And this can be held and understood what are  
20 the back-testing metrics on top of it; and then same  
21 data set informs also procyclicality metrics.

22 So two metrics also even give insight into

1 liquidity matters. For example, if we take this  
2 maximum rate of change or condition model of a one-day.  
3 This gives us a number of 16 percent, 24 percent,  
4 similar numbers that we have seen on other slides  
5 today. So rate of change from one day to another,  
6 initial margin can change like 16 percent.

7 Now if you look at another metric here in green  
8 box, it's loss to margin ratio, that one day loss --  
9 worst loss divided by margin on the previous day. This  
10 goes as high as 103 for Eurostoxx, my second example.  
11 This means that if you have initial margin of  $x$ . You  
12 could have an intraday margin call of 1.03 times  $x$ . It  
13 could be the size of -- yeah, (inaudible) margin call,  
14 as high as IM. Whereas, the increase of IM next day is  
15 only like 16 percent, also here we see that the biggest  
16 -- the biggest thing for intraday margin calls are the  
17 current market moves.

18 Okay, let's move to the next slide please. And to  
19 the next one, I think we can skip it -- I covered it.

20 So in terms of the discussion going forward, if we  
21 look at this, different levels, where we are discussing  
22 it -- we've been to the level of -- I'm presenting the

1 perspective of Eurex Clearing, which is the box to the  
2 left bottom, 1 CCP and many CMs. And we know how it  
3 works out during the crisis, there is also one CM  
4 connected to many CCPs and serving many clients, but I  
5 think there are also higher levels of clearing  
6 ecosystems with many CCPs and many clients, many  
7 clearing members and there is also higher level of  
8 cleared and uncleared view.

9 So, and we evaluated a few pain points or pain  
10 points are visible from the discussions until now. I  
11 think we need to -- knowing this also pressing towards  
12 solution alternatives and intended target states,  
13 states based on what we learned and based on the  
14 outcomes, discussions, but also we should, I mean in  
15 search of systemic level solutions or to solve systemic  
16 problems that may be there, that potentially could  
17 occur, we should be looking also into solutions on  
18 higher levels.

19 And then, what is visible, only improvement at one  
20 CCP will probably not help progress with solutions for  
21 the overall picture.

22 Next slide please.

1 CHAIR KARNA: Mr. Senko, just let you know we're  
2 running a little short on time, so I just wanted to  
3 give you that heads up.

4 MR. SENKO: Yep. No, and that's the last slide so  
5 I think our view is that in short-term there is --  
6 seems to be a zone of agreement to have this back-  
7 testing in the data-based analysis of what should be  
8 the best trajectory of margins and then starting from  
9 there the CCPs can try to approach this ideal target  
10 state so that's purely this data-driven exercise, based  
11 on margins -- product level margins and PnL, and in  
12 midterm, I think we're happy to contribute to the  
13 discussion, if we want to find further, stronger  
14 solutions to kind of higher level problems at the  
15 systemic level.

16 Thank you very much for the possibility to  
17 contribute today and back to you, please.

18 CHAIR KARNA: Thank you very much, Mr. Senko. Our  
19 final presentation will be from Sayee Srinivasan,  
20 Deputy Director in the Risk Surveillance Branch of the  
21 CFTC's Division of Clearing and Risk. Mr. Srinivasan,  
22 please go ahead.

1 MR. SRINIVASAN: Thank you. Can you hear me?

2 CHAIR KARNA: Yes we can. Thank you.

3 MR. SRINIVASAN: Okay, thanks. So good morning  
4 from Washington, D.C. and at the outset, I would like  
5 to thank Commissioner Stump and the GMAC for inviting  
6 us to present at today's meeting.

7 Next slide please. So the usual disclaimer  
8 applies. And more specifically, I want to add a few  
9 more sort of clarifications.

10 As you see from the presentations by the previous  
11 presenters, there was a diversity of views on some very  
12 interesting aspects of how the systems work. So the  
13 material I'm going to be presenting today will touch on  
14 all those themes, but I'd just like to clarify that we  
15 have received, specifically the staff are still going  
16 through the analysis and we really haven't arrived at  
17 any conclusions.

18 So you know, we might be asking some provoking  
19 questions, but it's still just to get us engaged and I  
20 didn't find the correct issues, so I just thought to  
21 make that explicit.

22 Second, you know, I'd like to. I'm still on the

1 previous slide.

2 Second, just in terms of looking back at 2020,  
3 we'd like to thank our colleagues in the newly named  
4 Market Participants Division. We work very closely  
5 with them. And we did that through March and April and  
6 sort of continued to work with them, but we'd also like  
7 to thank the DCOs and the FCMS and other market  
8 participants.

9 We keep bugging them for lots of information, and  
10 we really appreciate the support and collaboration.

11 And finally, from a regulatory perspective, while  
12 CFTC has been spending a fair amount of time studying  
13 and analyzing and understanding what happened in the  
14 market and helping function, we've also been spending a  
15 lot of time with other regulators, both in the U.S. and  
16 internationally. I know daily, weekly, and sort of  
17 regular calls multiple times a day and that's been a  
18 pretty important part of what we've been doing this  
19 year.

20 Next slide.

21 So, because some of the themes I'm going to be  
22 covering are essentially the same ones that the other

1 presenters had done, so I won't spend much time on  
2 this.

3 Next slide.

4 It's also shameless marketing for the Risk  
5 Surveillance Branch. It might be one of the well-kept  
6 secrets at the CFTC. So functionally, we are  
7 responsible for three things: one is margin model  
8 oversight, a lot of discussions of margin model  
9 performance so that's -- we have a group that's  
10 dedicated to studying margin models, doing quantitative  
11 assessment for margin models.

12 So the stuff is pretty close to what we do on a  
13 daily basis.

14 The Commission is -- we receive very rich set of  
15 highly granular reports daily from the DCOs and FCMs.  
16 And over the years we've invested a fair amount of  
17 effort to develop this quantitative data surveillance  
18 program where we can do pretty granular analysis of the  
19 product level account or portfolio level and sort of  
20 firm-entity level both for for F&O and for swaps.

21 And then finally, we do care about the CCP  
22 resilience and systemic risk issue, but from very

1 quantitative perspective, and you see that through our  
2 supervisory stress tests. Next slide.

3 So this is a picture that other -- a similar  
4 representation that others have shown. And this  
5 basically shows that the initial margin which was  
6 posted with the CCPs during 2020. The dark line, the  
7 blue line basically shows the -- sort of the rate at  
8 which the IM collected was changing and you can see  
9 there was a nice spike that occurred in March, and sort  
10 of slowly trending downwards as volatility subsided a  
11 little bit.

12 Next slide.

13 So once again, a similar chart like as others have  
14 shown. We had the pandemic and there was a huge  
15 increase in both IM and VM. And just one thing I'd  
16 like to point out is there could be days when the CCPs  
17 would have returned some IM to the market participants.  
18 What we capture here just the sort of the positives  
19 flows.

20 Next slide.

21 Once again, others have pointed this out. You  
22 know market models are not supposed to cover all the

1 moves, and some of the shocks that we saw in March and  
2 April, they were clearly you know beyond the 99.7 or  
3 99.8 coverage that many CCPs target. So, we had sort  
4 of the job we do on a day-to-day basis -- you know, we  
5 keep reminding ourselves that IM is meant to help CCPs  
6 cover the cost of liquidating a defaulting member's  
7 portfolio. In that sense, it has a very precise  
8 functional purpose.

9 And so, the more important question that others  
10 have been discussing, and for us, is that how well did  
11 these markets -- the models function and whether the  
12 models reacted appropriately.

13 Next slide.

14 Nick and others have spoken about this. So we do  
15 track product level features, we find them interesting  
16 and apologies for the very busy slide. The picture on  
17 the top just is our way of tracking product level  
18 breaches and you're able to size it by the size of the  
19 IM, so that we're focusing on the more important  
20 contracts. The one, the picture -- the bottom picture  
21 just is our attempt at trying to put a dollar value on  
22 the size of the beaches.

1           And what we see is as we go about doing our  
2   business and you know tracking all this activity and  
3   performance at account level and so on and so forth,  
4   we are acutely aware of the fact that products will not  
5   default, and we find the discussion of product level  
6   breaches very interesting as I said, but we are also  
7   very conscious of the fact that a product does not  
8   default. Firms are the ones who have the potential of  
9   defaulting.

10           So that raises the question as to what sort of  
11   account level breaches we have seen. The CPMI -- the  
12   quantitative disclosures by the CCPs contain some  
13   information in the public domain. But what we see from  
14   the regulatory data is that yes, there were account  
15   level breaches. But they were pretty small in number.  
16   That's the first point.

17           Second, is as we sort of dig deeper into the  
18   constitution of the portfolios of those accounts. They  
19   tend to be smaller accounts and pretty -- with less  
20   diversified, more directional holdings. And we're able  
21   to sort of aggregate the positions across, the  
22   liabilities across all these accounts and make an

1 assessment of, you know, whether there was anything  
2 adverse to the clearing member or the CCP, and we felt  
3 comfortable that we never got to the point where there  
4 was any concern.

5 So, but, you know, we keep reminding ourselves of  
6 that, you know, while products are important, what  
7 really matters is what's happening at the account  
8 level.

9 I'll sort of segue to -- next slide -- to a couple  
10 of sort of macro-ish type questions and similar to what  
11 others have been talking about here, I want to provide  
12 some illustration of where we are and some other  
13 analysis and then some initial findings.

14 So the first question I'm just going to touch on  
15 two questions. And the first question is, were CCPs'  
16 margin models too reactive to the shock? And hence,  
17 not appropriately antiprocyclical.

18 Next slide.

19 So, this is what we have here is, this is for  
20 interest rate swaps across the three DCOs who covered  
21 these instruments, and we are tracking activity at  
22 client level, not house, just client level. We have

1 three, and this shows activity from February of 2020  
2 until a few weeks ago.

3 The blue line shows daily aggregate IM for these  
4 accounts, and it's indexed to hundreds, so basically,  
5 such as 100 for the values throughout 2020. The red  
6 line shows daily aggregated gross notional size of  
7 these accounts. I know there was a discussion of what  
8 is happening in the context of open interest and they  
9 were trying to do a similar tracking about what is  
10 happening to position changes.

11 And this is also an indexed number. The green  
12 line is a sort of a standard measure of risk and  
13 interest rate swap markets, it sort of measures the  
14 DV01 of these portfolios. In other words, the dollar  
15 value of one basis point change in interest rates.

16 So we know that changes in IM that's collected by  
17 the CCPs are driven by broadly two factors: One,  
18 position changes, record activity that's happening in  
19 the markets and there's some interesting discussion by  
20 the previous panelists on what is happening in  
21 different markets. And the red line attempts to sort  
22 of capture the sort of position change factor.

1           And the second is CCPs' models' reactions to  
2 volatility.

3           Now if you look at the aggregate numbers, one  
4 could read certain patterns in the data. So,  
5 fortunately, we have access to more granular data and  
6 so we will be looking very carefully at disaggregated  
7 data. But, you know, we have seen some discussions in  
8 the public domain of people sort of trying to draw  
9 conclusions by just looking at aggregate data, so we  
10 have sort of been digging deeper.

11           And you can go to the next slide please.

12           So what we have done here is -- this is for  
13 interest rate swaps again. And we have sort of  
14 disaggregated the -- those three time series of  
15 variables across, in different categories of market  
16 participants. We have asset managers, insurance  
17 companies, hedge funds and banks.

18           And when I say bank, it's a bank that will come in  
19 as clients of clearing members or FCMs.

20           So as we dig deeper into data, what we observe is  
21 that there's a fair amount of heterogeneity in IM  
22 flows. We do see IM increasing across all these

1 different types of market participants, but the  
2 position changes are very different across these  
3 participants. And also, you know, the risk behavior  
4 within each group of these firms is very different.

5 So clearly in a portfolio, competition matters.

6 Next slide. We do the same thing for CDS and we're in  
7 the process of doing something similar for F&O also.

8 Here instead of gross notional, we are tracking  
9 net notional. That's the only difference, and then  
10 instead of DV01, we're tracking the dollar value of a  
11 basis point change in the credit spread. So, as you  
12 can see, based on the data we have, there was some  
13 interesting drop in activity in sort of open interest  
14 if you measure it as sort of the net notional.

15 Next slide.

16 As you disaggregate it, once again we see a fair  
17 amount of heterogeneity among the different groups of  
18 market participants. In some sense, it is more drastic  
19 than what we see for interest rate swaps. And as we  
20 all know, there was a fair amount of volatility in the  
21 credit markets. In some sense, we could argue that  
22 they were more volatile than what we saw in the

1 interest rate market also.

2 So, we continue to do further analysis, but I just  
3 wanted to give folks a flavor for, and as we get deeper  
4 and deeper into the data, some of the patterns one  
5 might see in some of the conclusions you might find by  
6 just looking at aggregate data, they start breaking  
7 down. So there is more analysis to be done, and we  
8 anticipate we will be busy conducting that analysis  
9 through 2021.

10 Next slide, please.

11 This is my final slide and the second sort of  
12 macro-ish question that we have been interested in, is  
13 and others have spoken about it, which is did margin  
14 calls cause stress in the funding markets and stress  
15 among market participants?

16 What we are engaged in right now is trying to get  
17 -- conduct empirical database analysis to collect  
18 evidence of what actually was happening. We are really  
19 interested in understanding the impact on the broader  
20 system, on clients, on members because, in some sense,  
21 you can say that, you know, the whole idea of APC is to  
22 sort of balance the interests of CCP resilience with

1 broader market functioning.

2 And one challenge we are facing, that we keep  
3 running into is what we call the denominator problem.

4 As you've seen, we have incredible access to IM and VM  
5 flow data at the granular level for the cleared  
6 markets. The biggest challenge is getting access to  
7 data to assess the relative size of these flows,  
8 relative to the other liquidity demands that clients  
9 were facing, intermediaries and the broader financial  
10 system.

11 So we are engaged in working with market  
12 participants to collect more data and conduct the  
13 analysis so that we can sort of look at these things  
14 more holistically.

15 Once again, this is going to keep us busy through  
16 2021. And we look forward to coming back to the GMAC  
17 and its members and providing you all an update. Thank  
18 you.

19 CHAIR KARNA: Thank you very much Mr. Srinivasan.  
20 Commissioner Berkovitz, do you have a question for our  
21 panel?

22 COMMISSIONER BERKOVITZ: Yes, thank you.

1           Thank you to all the panelists for very  
2           interesting presentations and perspectives, and one  
3           fact in the presentation that really struck me was in  
4           the CME presentation, talking about the relative  
5           percentage change in open interest and where the  
6           significant change in open interest, most significant,  
7           were on the E-Mini S&P and WTI. A 32 percent change in  
8           E-Mini S&P and an almost 30 percent change in WTI, and  
9           the initial margin requirements that CME is presenting  
10          on that page show that equities in E-Mini S&P have the  
11          most significant or the largest initial margin  
12          requirements.

13           I'm aware, anecdotally, that one thing that  
14          happened and I think this is, we saw this in WTI, but  
15          anecdotally, what I've been hearing is around this  
16          time, there was a significant increase in retail  
17          participants and people sitting at home at their  
18          computer, people thinking the market's crashing. A lot  
19          of retail people jumping in the market. We had a  
20          number of brokerages unable to handle the retail  
21          volume.

22           So I guess the question would be, to what extent

1 are these -- a lot of the increase in open interest and  
2 then the resulting increased margin requirements due to  
3 new market entrance due to retail participants? And I  
4 guess the answer to that may affect the balance  
5 between, if we find there's more margin increases  
6 during this period and maybe to avoid these -- to  
7 address the procyclicality, people are talking about  
8 floors, but if a lot of these new margin requirements  
9 are caused by new market participants and retail people  
10 coming in in a period of incredible volatility, then  
11 you're basically -- one consequence you'd basically be  
12 saying "Well, everybody's got to pay up before," so  
13 that when new people come in, in a time of volatility,  
14 you know, not everybody doesn't have the stress of the  
15 procyclicality.

16 So I think the composition of the market is also  
17 something that is interesting -- would be interesting  
18 to look at, and I was wondering if any of the panelists  
19 or any presenters have any perspective on that. Are we  
20 seeing or did we see a difference in composition of the  
21 market that new people coming in, and therefore that  
22 was affecting the margin requirements, too?

1 MR. CUTINHO: I can take that. This is Sunil from  
2 CME. Can you guys hear me?

3 CHAIR KARNA: Yes, please go ahead, Mr. Cutinho.

4 MR. CUTINHO: Hi. Commissioner Berkovitz, I am  
5 afraid I can't tell you exactly the composition of the  
6 clients. There is one difference to keep in mind that  
7 we now have gross margining, we did not have that  
8 during the global financial crisis.

9 So, as you pointed out, if -- you know the two  
10 things can change. You know if you're looking at  
11 aggregate margins, you know, as the level of  
12 participation from existing participants if they are  
13 adding on to the open interest and the open interest  
14 captures that at a higher level. And then also  
15 addition of participants, new participants entering the  
16 market.

17 So from CME's perspective, we rely on our firms to  
18 actually enumerate the positions of each of the clients  
19 and we margin each of them individually, and then we  
20 take the gross of that amount and call on member firms.

21 So, it's hard to answer that question without  
22 actually looking back and identifying the participants

1 across that time period.

2 MR. RUSTAD: Maybe I can have an interesting  
3 perspective. Please, Commissioner Berkowitz, it's Nick  
4 Rustad again.

5 I tend to agree with Sunil, I don't think the  
6 underlying participants in the market and whether they  
7 are in or out, or new people coming in or out, should  
8 affect the level of initial margin, which a CCP set for  
9 that particular margin. One of the reasons why we  
10 would ask that initial margin would be set  
11 appropriately and cover a range of scenarios is taking  
12 into account new entrants and a variety of market  
13 participants.

14 I think one slightly more interesting subtopic  
15 from the topic you raised about retail participation is  
16 -- how is the retail participation happening, which  
17 member firms are they accessing the market through and  
18 what is the capital standards of those particular  
19 firms?

20 Because I think the issues which we touch upon is  
21 we're obviously worried about systemic risk in the  
22 system. And I think we've heard a couple of times

1 today and previously, and I referred to it in my  
2 remarks, the bringer of risks to a system should  
3 backstop for risk in the system.

4 But when these new participants are coming and  
5 they're coming through, you know, potentially weaker  
6 capitalized entities, then I think that's, you know  
7 that is a cause of concern.

8 CHAIR KARNA: Thank you Mr. Rustad. I recognize  
9 that we're running short of time. Ms. Hong, would you  
10 like to offer some final comments.

11 MS. HONG: Yes, thank you. Hi, it's Amy Hong from  
12 Goldman.

13 First, I'd like to thank the panelists for your  
14 thoughtful and thorough presentations. The industry  
15 has so much more to learn from how the markets  
16 performed under pronounced stress in March, including  
17 the impact of post-crisis reform. We have the benefit  
18 of a significant amount of data as evidenced by the  
19 presentations today, which will guide a thoughtful and  
20 thorough look at what worked well, what didn't. And  
21 what may need to be recalibrated.

22 As it relates to margin levels, there is a

1 tremendous amount of work and thought leadership  
2 already in the public domain from clearing members to  
3 CCPs, the buy side and regulated. And, you know, I  
4 very much appreciate the efforts of the CFTC, including  
5 Commissioner Stump with the GMAC and Commissioner  
6 Behnam with the MRAC, to bring us together on one of  
7 the most challenging and important issues for the  
8 stability of the derivatives market.

9 We look forward very much to continuing to  
10 collaborate with our clients, peers, and the CCPs, and  
11 the CFTC to build upon the current framework. Very  
12 much, you know, in particular I commend the FIA for  
13 their leadership and helping to drive an informed,  
14 data-driven discussion. There are clearly more  
15 reflections to be had, not only about increasing margin  
16 levels, but also about appropriately calibrating  
17 inputs, like the margin to rate of risk on certain  
18 products, margin levels in times of low volatility, and  
19 whether floors should be instituted with appropriate  
20 and transparent look back periods to ensure the  
21 resilience of the clearing ecosystem in both good times  
22 and in bad.

1           So, you know, with that I'd just like to  
2     reiterate, you know, very much my appreciation for the  
3     opportunity to engage in this dialogue with all  
4     different perspectives around the clearing ecosystem.  
5     Thank you very much.

6           CHAIR KARNA: Thank you very much Ms. Hong.

7           Mr. Cutinho, I think you have a couple of comments  
8     that respond to the presentations and then I'll turn it  
9     back over to Andree.

10          MR. CUTINHO: Thank you. I'd like to thank the  
11     presenters as well for a very informative presentation  
12     across the board. But I'd like to draw three things to  
13     the panel's attention.

14          First, you know, we try and look at margins as a  
15     percentage of notional in the contract but there are  
16     serious problems with that approach. So, I'll give you  
17     a very simple example. If you kept margin rates  
18     constant and if the market dropped by 30 percent,  
19     margin as a percentage of notional would increase by 43  
20     percent.

21          So, it is not a good comparison. And you wouldn't  
22     want margins as a percentage of notional to remain

1 constant and fall, especially when risks are  
2 increasing.

3 The second -- you know, I don't think, you know, I  
4 think we need to actually be careful comparing the  
5 global financial crisis to the pandemic. I'm heartened  
6 by the fact that many people recognize that, but a few  
7 things to note.

8 One is volatility. If you look at 20-day  
9 volatility, increased 500 percent during the pandemic.  
10 It was not the case during the global financial crisis.  
11 So when comparing margin increases, and I think the  
12 presenters tried to do this, it's important to compare  
13 the margin increases to the environment we are in.  
14 Notwithstanding the, you know, the -- notwithstanding  
15 the side effect of greater costs for market  
16 participants to keep their risk exposures or take on  
17 more exposures.

18 The second thing about comparisons. You know,  
19 it's not the same environment. During the global  
20 financial crisis, we did not have gross margining. We  
21 have gross margining now. So the numbers are a little  
22 bit inflated.

1           And then with respect to retail participants. I  
2 think it's wrong to conclude that retail participants  
3 in and of themselves are risky. It's also wrong to  
4 conclude that because we have more retail  
5 participation, they would come in through weakly  
6 capitalized firms. I think, you know, and this is true  
7 with CME, we always look at clients, and we look at  
8 firms. We look at firms, and the clients that they  
9 support, we look at the capital that they have.

10 Capital wherewithal that they have, and we compare that  
11 to their clients. Not only on the rate of the exposure  
12 relative to the firm's capital. But we also compare  
13 their stress losses to the firm's capital.

14           So I think there is no substitute for managing  
15 risk but I would urge people not to walk away with  
16 prejudices against either firms who are small or  
17 clients who are retail, rather than institutional.

18           And then finally, I would say that I know there is  
19 a temptation, and I've seen this happen to constrain  
20 CCPs, or any counterparty, from covering their risk  
21 exposures. We completely understand the concept of  
22 antiprocyclicality and I believe we've demonstrated

1 that.

2 The important thing is to resist the temptation to  
3 place constraints, because not all crises are the same,  
4 and CCPs as well as clearing firms, as well as  
5 nonclearing counterparties, need tools available to  
6 them to manage risk. If not, we are going to introduce  
7 more systemic risk. So with that, I yield my time.

8 Thank you.

9 CHAIR KARNA: Thank you Mr. Cutinho. I would note  
10 that we're a couple of minutes over time.

11 Commissioner Stump, this has clearly been a very  
12 robust forum and we still have some additional comments  
13 but I'm going to turn it over to Andree to finish out  
14 today's agenda.

15 MS. GOLDSMITH: Thanks Angie. I'll just quickly  
16 turn it over to the Commissioners for any closing  
17 remarks. I'll start with Commissioner Quintenz.

18 COMMISSIONER QUINTENZ: Thank you, Andree. I  
19 don't have any closing remarks, other than to say that  
20 I thought this was one of the, if not, the most  
21 informative and data-driven and insightful advisory  
22 committee meetings, of which I've ever been a part and

1 appreciate some of the different views around that  
2 data, some of the hard questions that are being asked.

3 But I found it wonderfully productive and  
4 informative and appreciate all the hard work that was  
5 put into these presentations. Thank you very much.

6 MS. GOLDSMITH: Thank you. Commissioner Behnam.

7 COMMISSIONER BEHNAM: Thanks Andree, I'll echo  
8 Commissioner Quintenz's statements. A really excellent  
9 discussion and thanks to you, Andree, and Angie, and  
10 Commissioner Stump, and of course, all the panelists  
11 from stakeholders from the private sector and of  
12 course, the CFTC staff who were able to present. A lot  
13 of great takeaways and look forward to continuing the  
14 discussion. Thanks.

15 MS. GOLDSMITH: Thank you. Commissioner  
16 Berkovitz.

17 COMMISSIONER BERKOVITZ: Thank you. Yes, I would  
18 agree with both Commissioner Behnam and Commissioner  
19 Quintenz, excellent presentations. Very data -- very  
20 data-driven but that's what we need to make sound  
21 regulatory decisions, the best information available.

22 So, thank you for the presentations and not only

1 data-driven but diverse viewpoints, and I think we're  
2 strengthened by having a variety of viewpoints and  
3 perspectives on the significance of that data.

4 So, thank you everybody, for all the  
5 presentations, and again, Andree and Angie, and  
6 Commissioner Stump for your leadership in setting up  
7 this presentation and meeting today. Thank you.

8 MS. GOLDSMITH: Thank you. Commissioner Stump.

9 COMMISSIONER STUMP: Thank you, Andree and thanks  
10 Angie for managing today's meeting.

11 Several months ago when we were discussing  
12 potential dates to hold this meeting, I had truly hoped  
13 that by scheduling today's meeting towards the end of  
14 the year that we might be in a position to convene in-  
15 person. And while that's unfortunately not the case,  
16 I'm very thankful that we can continue to advance the  
17 GMAC's priorities in a format that ensures everyone's  
18 health and safety.

19 I'm also very grateful to the GMAC members for  
20 continuing to engage with the committee this year,  
21 despite the challenging circumstances, and I think, as  
22 indicated by the fact that we've run out of time today,

1 we have so much more to discuss in 2021 and I very much  
2 look forward to that. I'm hopeful that I will see all  
3 of you again in-person in 2021.

4 And as this is the last public meeting of the  
5 year, not only for the CFTC's five advisory committees,  
6 but also for our Commission, I wanted to commend all of  
7 my regulatory colleagues around the world as well as  
8 the market participants and infrastructure providers  
9 who have contributed to preserving sound and efficient  
10 markets during this very challenging year. I wish  
11 everyone happy holidays and may your New Year be safe  
12 and healthy.

13 Thank you.

14 MS. GOLDSMITH: Thanks Commissioner Stump. I also  
15 want to thank everyone for attending today's GMAC  
16 meeting and I wish everyone a safe and healthy holiday  
17 season. This meeting is now adjourned. Thank you.

18 (Whereupon, at 12:08 p.m. EST, the meeting of the  
19 Global Markets Advisory Committee was adjourned.)
