salmon captured in the Keswick Dam fish trap. Eggs produced from these fish will be incubated at Livingston Stone NFH until the eyed stage, at which time they will be moved off-station by CDFW to remote-site incubators (RSIs) installed on Butte, Clear, Deer, and/or Mill creeks. In addition to the artificial propagation of spring-run Chinook salmon at Livingston Stone NFH in the capacity described above, natural-origin spring-run Chinook salmon trapped at Keswick Dam in excess of the agreed upon spawning target, or otherwise not selected for propagation, be translocated to Butte, Clear, Deer, and/or Mill creeks, instead of returning them to the Sacramento River at Caldwell Park. This action will promote spawning in higherquality tributary spawning and rearing habitats that are spatially separated from adult fall-run Chinook salmon spawners.

Permit 18181-6M

The permit modification requested by CDFW will allow for the operation of RSIs in various Central Valley rivers. The use of RSIs is expected to enhance the survival of ESA-listed Chinook salmon by: (1) spreading the risk of adverse impacts to early life stages caused by drought conditions; (2) assessing the efficacy of RSI systems for potential use in any future reintroduction program efforts; and/or (3) studying the growth, survival, and outmigration timing of juvenile salmon in their historical habitat to inform longterm reintroduction planning. RSIs may be deployed and operated in the McCloud River using Sacramento River winter-run Chinook salmon eggs from Livingston Stone NFH. RSIs in Butte, Clear, Deer, and/or Mill creeks would utilize Central Valley spring-run Chinook salmon eggs from adults incidentally captured at the Keswick Dam fish trap and spawned at Livingston Stone NFH.

CDFW also proposes to carry out monitoring and evaluation activities to assess the performance of reintroduction efforts in the McCloud River. Snorkel surveys may be conducted to monitor outmigration timing, juvenile distribution, and habitat use. Juveniles will be recaptured using rotary screw traps (or an alternative juvenile capture method, if determined necessary), which may include efficiency trials to expand fish counts to estimates of growth, survival and productivity of juveniles in the McCloud River. Habitatassociations will be assessed through snorkel surveys and/or backpack electrofishing at various locations in the McCloud River from Ah Di Na to Lake Shasta.

Authority

Scientific research and enhancement permits are issued in accordance with section 10(a)(1)(A) of the ESA (16 U.S.C. 1531 et seq.) and regulations governing listed fish and wildlife permits (50 CFR 222–226). NMFS issues permits based on finding that such permits: (1) are applied for in good faith; (2) if granted and exercised, would not operate to the disadvantage of the listed species that are the subject of the permit; and (3) are consistent with the purposes and policy of section 2 of the ESA. The authority to take listed species is subject to conditions set forth in the permits.

Anyone requesting a hearing on an application listed in this notice should set out the specific reasons why a hearing on that application would be appropriate (see ADDRESSES). Such hearings are held at the discretion of the Assistant Administrator for Fisheries, NMFS.

Applications Received

This notice is provided pursuant to section 10(c) of the ESA. NMFS will evaluate the applications, associated documents, and comments submitted to determine whether the applications meet the requirements of section 10(a) of the ESA and Federal regulations. The final permit decisions will not be made until after the end of the 30-day comment period. NMFS will publish notice of its final action in the **Federal Register**.
