# RE: CFTC Regulation 40.6(a) Certification. Revisions to CME Position Limit, Position Accountability and Reportable Level Table for Weather Products. CME Submission No. 13-547

Dear Ms. Jurgens:

Chicago Mercantile Exchange Inc. ("CME") is self-certifying revisions to the Position Limit, Position Accountability and Reportable Level Table (the "Table") in the Interpretations & Special Notices Section of Chapter 5 of the CME Rulebook.

The revisions will become effective on January 6, 2014, and are being adopted to ensure that the Table is in compliance with Commodity Futures Trading Commission ("CFTC" or "Commission") Core Principle 7 ("Availability of General Information"), which requires that DCMs make available to the public accurate information concerning the contract market's rules and regulations, contracts and operations. In connection with CFTC Core Principle 7, CME has reviewed the information concerning its weather contracts as set forth in the Table and made primarily stylistic changes (e.g., formatting and consolidation of tabs) to the Table. In addition, the following more substantive changes have been made to the weather products set forth in the Table:

- Cells have been formatted to make them easier to read. We have formatted headers such that they are harmonized with the Position Limit, Position Accountability and Reportable Level Table set forth in Chapter 5 of the NYMEX Rulebook.
- Hyperlinks to the weather Rulebook chapters have been removed.
- Numbers have been converted from 'text' format to 'number' format.
- A separate row for each option on futures has been added which shares the same clearing code as that of its corresponding futures contract.
- Contract names in column A have been conformed to the product chapter titles in the CME Rulebook.
- Several invalid products which were inadvertently incorporated into the Table have been removed.
- Several products which were inadvertently omitted from the Table have been added.
- For option contracts, the contract unit of "1 futures" has been replaced with the contract unit of the respective futures contract.
- The subcategory name in the Group column (H) has been changed to "Weather" for all the weather-related products.

1 North End Avenue New York, NY 10282 T 212 299 2200 F 212 299 2299 christopher.bowen@cmegroup.com cmegroup.com

- Terms have been conformed for consistency and style in the "Type" Column F, "Settlement" Column G and "Group" Column H.
- For certain weather contracts, all month accountability limits or all month accountability levels have been replaced with single month accountability levels to align all weather futures and option contracts to mirror what is already in place for the hurricane and binary contracts which calls for single month position accountability levels for positions exceeding 10,000 in any contract month.

These changes are reflected in the position accountability table in Chapter 5 in black-line format. Exhibit A contains underlying market analysis supporting this change.

The Market Regulation Department and the Legal Department collectively reviewed the DCM Core Principles as set forth in the Commodity Exchange Act ("Act"). During the review, we have identified that the changes described above may have some bearing on the following Core Principles:

<u>Compliance with Rules</u>: The changes resulted from a comprehensive review of the existing product chapters and the Table, with the goal that the Table be completely accurate, and comprehensive. All product terms and values were reviewed to ensure accuracy, and obsolete and inaccurate information was removed or modified.

<u>Position Limitations or Accountability</u>: This Core Principle requires the DCM to adopt for each contract, as is necessary and appropriate, position limitations or position accountability for speculators. All weather position limits or all month accountability levels have been eliminated and replaced with a uniform single month accountability level of 10,000 contracts in any contract month. This harmonizes all the weather products to what is already in place for the hurricane and binary contracts. CME asserts that the change to a uniform 10,000 contract single contract month accountability level is in compliance with this Core Principle.

<u>Availability of General Information</u>: The revised Table is part of a larger Core Principle 7 project undertaken to ensure that the product chapters are accurate and remain in compliance with Core Principle 7. Notice pertaining to the revised Table will be disseminated to the marketplace via the issuance of a Special Executive Report and will highlight any changes deemed material.

The revisions to the Table appears in Exhibit B.

CME certifies that the revisions in Exhibit B comply with the Act and regulations thereunder. There were no substantive opposing views to this proposal.

The Exchange certifies that this submission has been concurrently posted on the Exchange's website at <a href="http://www.cmegroup.com/market-regulation/rule-filings.html">http://www.cmegroup.com/market-regulation/rule-filings.html</a>.

If you have any questions regarding this submission, please contact Nadine Brown, Market Regulation, at 212-299-2223, or contact me at 212-299-2200. Please reference CME Submission No. 13-547 in any related correspondence.

Sincerely,

/s/ Christopher K. Bowen Managing Director and Chief Regulatory Counsel

# Weather Market Analysis

<u>Justification to Position Accountability from Position Limits</u> – Currently all of the weather futures and option contracts are classified with the all month position limit of 10,000. The exceptions are the hurricane contracts and binary snowfall and rainfall contracts, which are already assigned to position accountability with a 10,000 single month status. The change to position accountability will align the weather futures and options contracts to mirror what is already in place for the hurricane and binary contracts which calls for position accountability for positions exceeding 10,000 in any contract month. These changes will be reflected in the position accountability table in Chapter 5.

Moving to a position accountability designation will allow our current and new market participants to trade without having to apply for a hedge exemption. In talking with customers the hedge exemption was a nonstarter for them to participate in our weather markets in the past. This change will give such industries as energy, power, retail etc one less barrier to trade our weather products with size.

Weather is a unique commodity that inherently has no deliverable supply. In product-related discussions with CFTC staff, CME has noted the following: 1) that due to the secured locations of the recording instruments, major airports, that the index is not susceptible to manipulation; 2) a number of weather data suppliers are monitoring the data being released by these governmental agencies and any errors would be reported and corrected promptly by the reporting agencies; and 3) there is a precedent of position accountability in our hurricane and binary contracts.

<u>Cash Market and Risk Management Application</u> – HDD and CDD contracts are employed by a wide variety of enterprises, largely operating in the context of the energy industry, to manage their temperature related risks.

Energy companies, for example, have been known to sell HDD or CDD contracts to manage the risk of diminished revenues under mild weather conditions, noting that the quantity of energy sold is heavily contingent upon consumer demand driven by temperatures. Large scale energy consumers including automobile manufacturers and large residential building operators may buy HDD or CDD contracts to hedge against the risk of rising utility costs under extreme weather conditions.

Retailers whose sales are sensitive to weather conditions might control inventory costs more effectively through the use of HDD or CDD contracts. Beer consumption reaches a seasonal peak in the summer and cool weather can put a dent in beer sales. "the 2000 Preliminary Report for SABMiller, "History shows that on a summer day with the temperature over 25 degrees Celsius, sales can be more than 50% greater than on a day where the temperature is under 20 degrees ... "

Amusement parks rely on favorable weather noting that people stay home if conditions are too hot or cold. It is a simple matter for parks to correlate temperatures to attendance and construct a "collar" to hedge revenues should temperatures fall outside a preferred range.

Similarly, utilities may utilize HDD or CDD contracts to guard against so-called "volumetric risks." These volumetric risks are based upon the quantity of energy that might be expected to be marketed throughout the course of a heating or cooling season. These transactions rely upon the intuitive and well-documented relationship between power consumption and temperature extremes.

Thus, if the daily average temperatures during the course of a winter season were abnormally high, utility firms might face depressed demand for heating. Utilities have traditionally increased consumer prices to offset lower retail consumption volume. However, intensifying competition caused by ongoing deregulation has made it increasingly difficult for utilities to raise prices arbitrarily. Therefore, it becomes necessary for utility firms to address volumetric risks using other means such as HDD or CDD contracts.

A simple numerical example is presented here to illustrate the hedging application of HDD futures. Let us assume that ABC Utility Co. sells electricity in the Chicago area at \$0.08/Kilowatt hour. Under normal winter weather conditions, ABC may forecast sales of 1 billion Kilowatt-hours (kWh) with a projected revenue of \$80 million. However, ABC is concerned about the possibility of Ĕl Nino weather effects and would like to utilize HDD futures to hedge against the possibility of warmer than expected winter conditions.

In order to construct a hedging strategy, it will become necessary to quantify the relationship between economic outcomes (such as sales revenues) and weather conditions (as implied in weather futures prices). In particular, one wants to find an appropriate hedge ratio (HR) that might balance the anticipated change in revenues (denoted as Changing syalweh of hethe subject derivatives contracts (

conditions is frequently useful in assessing these quantitative relationships.

Assume that, based on historical regressions, ABC finds that its sales are positively correlated with the CME Group Chicago HDD Index with a sensitivity ratio of 0.80. *I.e.,* a 1% change in HDD may give drive a 0.8% change in ABC's anticipated \$80 million in revenues. Assuming futures are trading at 1,250.00, an effective hedge ratio may be calculated as follows.

Hedge Ratio (HR)	=	Revenues Value of Futures	
		(\$80,000,000 x 0.8%) 2,560 futures contracts	□ (1,25

This suggests that ABC might sell 2,560 futures to hedge the risks of higher than expected temperatures and lower than expected revenues. Assume that temperatures are mild and that the HDD Index settles at 1,150. This decline of 100 HDDs (8% of original value of 1,250) implies that sales may decline from 1 billion to 936 million kWh for sales of \$74,880,000 (\$0.08/kWh x 936,000,000 kWh). This implies a revenue shortfall of \$5.12 million. But this shortfall is offset by a corresponding \$5.12 million profit in futures.

	Revenues	Futures
Now	Expected Revenues of \$80 million or 1 billion kWh @ \$0.08/kWh	Sell 2,560 futures @ 1,250
Later	Realized Revenues of \$74,880,000	Futures Settled @ 1,150
	Revenue Shortfall of \$5,120,000	Profit of 100 HDDs or \$5,120,000 (= 2,560 x 100 x \$20)

(We should note that this analysis is based upon an assumption that the relationship between sales and temperatures is linear when, in fact, it is more likely that a non-linear relationship exists such that energy demands will increase (decrease) exponentially as a function of rising (falling) HDDs. In other words, the hedge ratio becomes rather dynamic and may therefore require active adjustment in response to changing conditions.)

Proper use of temperature related contracts not only enables utility firms to stabilize revenue streams but may also be used to provide at least a partial hedge to the cost side of the equation. Note that most utility firms operate under inherent capacity limitations. In particular, electricity represents a non-storable commodity. If temperature suddenly rise or decline dramatically, utility firms may need to deploy less efficient generators to meet the sudden jump in demand or may be compelled to purchase electricity from the power grid in the face of soaring demands and rising prices. This implies that energy prices may increase and transmission costs may grow simultaneously. In this case, utility firms may find both weather derivatives and energy contract useful to stabilize its economic outcomes, i.e., to hedge both volumetric and cost based risks.

<u>Weather Market Overview</u> – It has been estimated that weather exerts a significant impact upon approximately one-third (1/3rd) of U.S. economic activity. Noting that the Gross Domestic Product (GDP) of the U.S. totaled some \$17 trillion in 2012, this suggests that weather conditions exerted an influence over some \$5.6 trillion in GDP in 2012. The impact that weather has on businesses such as energy and agriculture is particularly acute. However, not only energy and agriculture observe the weather conditions. The lists of other economic sectors that are affected by the weather include construction and transportation sectors that have to content with delays and budget overruns. The retail and entertainment sectors have a similar situation when weather turn unfavorable. A retailer may have stocked up on winter clothing only to have the season be unseasonably warm, causing markdowns at the end of the season to move merchandise, and incurring a loss. Entertainment such as concerts, municipal parades, ski resorts, amusement parks etc. can be impacted by rain, cold and heat translating into lost revenue.

Some of the sellers of weather products are insurance and reinsurance companies along with hedge and pension funds that are looking for assets that are uncorrelated to their current portfolio holdings.

A general breakdown of current and past market participants consist of 8 brokers, 7 reinsurance companies, 4 manufacturers, 2 retailers, 12 energy/ power companies, 6 banks/hedge/pension/props

## Rulebook Weather Chapters Affected by Reclassification

In CHAPTER 5 - TRADING QUALIFICATIONS AND PRACTICES the POSITION LIMIT, POSITION ACCOUNTABILITY AND REPORTABLE LEVEL TABLE will be amended to reflect the reclassification of weather products from position limits to position accountability. The amended Chapter 5 table will have deletions struck out and additions underlined. The weather chapters that will be affected by this reclassification are as follows: 402 CME Seasonal Strip Snowfall Index Futures, 402A Options on CME Seasonal Strip Snowfall Index Futures, 403 CME Degree Days Index Futures, 403A Options on CME Degree Days Index Futures, 405 CME Seasonal Strip Degree Days Index Futures, 405A Options on CME Seasonal Strip Degree Days Index Futures, 406 CME European HDD Index Futures, 406A Options on CME European HDD Index Futures, 407 CME European Seasonal Strip HDD Index Futures, 407A Options on CME European Seasonal Strip HDD Index Futures, 408 CME European CAT Index Futures, 408A Options on CME European CAT Index Futures, 409 CME European Seasonal CAT Strip Index Futures, 409AOptions on CME European Seasonal CAT Strip Index Futures, 411 CME Pacific Rim Index Futures, 411A Options on CME Pacific Rim Index Futures, 412 CME Pacific Rim Seasonal Index Futures, 412A Options on CME Pacific Rim Seasonal Index Futures, 416 CME Frost Index Futures, 416A Options on CME Frost Index Futures, 417 CME Seasonal Frost Index Futures, 417A Options on CME Seasonal Frost Index Futures, 418 CME Snowfall Index Futures, 418A Options on CME Snowfall Index Futures. 421 CME Canadian Degree Days Index Futures, 421A Options on CME Canadian Degree Days Index Futures, 422 CME Canadian Seasonal Strip Degree Days Index Futures, 422A Options on CME Canadian Seasonal Strip Degree Days Index Futures, 424 CME Weekly Average Temperature Index Futures, 424A Options on CME Weekly Average Temperature Index Futures, 425 CME Canadian CAT Index Futures, 425A Options on CME Canadian CAT Index Futures, 426 CME Canadian Seasonal CAT Strip Index Futures, 426A Options on CME Canadian Seasonal CAT Strip Index Futures, 439 CME Australian Degree Days Index Futures, 439A Options on CME Australian Degree Days Index Futures, 440 CME Australian Seasonal Strip Degree Days Index Futures, 440A Options on CME Australian Seasonal Strip Degree Days Index Futures, 441 CME Rainfall Index Futures, 441A Options on CME Rainfall Index Futures, 442 CME Seasonal Strip Rainfall Index Futures, 442A Options on CME Seasonal Strip Rainfall Index Futures.

The contracts listed above currently have an All Month position limit of 10,000 contracts. These contracts will reclassify to a Single Month Position Accountability level of 10,000 contracts. Currently, all the Hurricane contracts as well as the Binary Snowfall and Rainfall contracts have the Single Month Accountability level of 10,000 contracts with the options being aggregated into the single month futures this will hold true for all of the newly reclassified contracts.

<u>Price Reporting Agency</u> – The official weather data that is used to settle our contracts is published by government weather agencies. In the case of the United States, the National Weather Service is

responsible for the measurement, recording and issuance of the data. Weather stations used for CME weather contracts are located at major airports or government owned properties having 24 hour/365 day security measures in place to insure the accuracy of the data being reported.

These weather stations serve a vital function to air traffic safety around the world. Data readings from these stations are used to determine such things as flying and deicing conditions. Therefore, the accuracy and security of these instruments are a high priority for these government agencies. Instrument placement is usually out on the property in remote secure locations, so as not to be affected by jet engine or tarmac heat radiation and most importantly human tampering.

Listed below is the method used by the vendors to assure real time quality control of observed elements.

<u>Decoding Data</u> – Each day MDA and Speedwell decodes the respective data transmission feeds to determine what data exist for each reporting station for which there is a corresponding futures and options contract, plus additional surrounding stations.

<u>Data Recovery</u> – Upon determining that data is missing for a station for which there is a corresponding futures/options contract, vendors attempt to recover this data from alternative data sources, such as Climate Summary Reports, contacting the local NWS office or local media reports, as appropriate. If data cannot be recovered, the site is flagged and proprietary estimation techniques are used to estimate the missing data.

<u>Screening for Erroneous Values by Computer Algorithm</u> – All observations are screened a second time by meteorologists to ensure that the data is meteorologically acceptable. This analysis involves an online interactive environment for analysis.

<u>Creation of Estimates by Vendor Meteorologists</u> – Meteorologists will replace observations that have been flagged as missing or erroneous. The methods used for filling of missing or erroneous observations are dependent upon the situation and may include the following:

- Surrounding station observations may be used as guidance
- Known biases between stations may be applied
- Alternative data, hourly data, 6-hourly reports, partial observations, or other methods may be used to piece together missing observations

In summary, as weather data is being released, a number of weather data suppliers are monitoring the data for any unusual readings. If a reading were to be an outlier or missing it would be reported to the issuing agency to verify for accuracy and/or correction. Weather data suppliers such as MDA and Speedwell Weather, not only monitor the specific CME weather locations, but also surrounding weather stations. They use surrounding weather stations as one means to verify for the accuracy of data being issued by the reporting agency. MDA and Speedwell do this for all of the listed futures and options locations.

Not only are MDA and Speedwell checking the government agencies numbers for accuracy, but they are also checking each other's reported data for errors. So there are a number of checks in place within the industry to verify that the data being published and used for settlement are in fact accurate. MDA and Speedwell are the largest suppliers of weather related data to the futures and OTC markets.

CME Group Inc. has signed licensing agreements with both MDA and Speedwell to supply our daily weather data and within those agreements it also states that the employees of these data vendors shall be prohibited against trading directly or indirectly any futures and options contracts based on the data. Speedwell is a UK based company and has a restricted dealing list as required by the UK's Financial Conduct Authority that prohibits employees from trading.

# CME Group Inc. Weather Futures and Options Settlement Guidelines

Weather futures and options will be settled at 15:15 Central Time (CT), daily, unless an early close occurs on CME Globex.

All relevant information will be considered in the settlement calculation, including but not limited to: CME Globex bid/ask information, CME Globex Trade information, Block Trade information, CME Clearing360 trade information, and market information from third party sources.

CME Group reserves the right to deviate from these guidelines if they will lead to a settlement price which compromises the integrity of the market or would otherwise be inaccurate, impartial, or unfair to all or any market participants.

#### Monthly Futures

Approximately 3:00 p.m. - 3:10 p.m. CT, a snapshot of CME Globex market data will be taken. If a trade exists in an instrument, this will be the baseline for the settlement. If a CME Globex trade and Block trade both occurred for an instrument, the more recent of the two will be the baseline.

If the baseline falls outside of the posted CME Globex market, the settlement will be adjusted to either the bid or the offer, depending upon which side of the market the trade falls. Third party information will also be considered; if there is a better bid or offer posted on third party bulletins, for example, that is more recent than the trade and falls between the CME Globex bid or ask, the settlement price may be adjusted to respect this bid or offer.

In no case will third party information adjust the settlement price to a level outside of a posted CME Globex market.

Bids and offers smaller than 50 contracts (from any source) may be discarded for the purposes of settlement calculation, and the next best bid or offer that meets that minimum may be used. In the absence of trade information, the settlement will be the mid-market price of the posted CME Globex market.

In the absence of trade and market information, the settlement will revert to the previous day's settlement, unless the contract is "in period." If the contract is "in period," the settlement will be calculated by adding the actual observed heating or cooling degree days to date to the ten year average of HDDs or CDDs for the remainder of the period.

Monthly contracts with no trade information may be adjusted to reflect price discovery in the strips of which they are a component.

Options trades may be considered for the purposes of futures settlement in the absence of futures trades.

#### Seasonal or Strip Futures

Seasonal or strip futures will be settled according to the same procedures detailed above for monthly futures, with a few notable exceptions:

In the absence of trade data, the seasonal or strip settlement will be the sum of the component month settlements. If this falls outside of a posted CME Globex bid or offer, the strip settlement will be adjusted to that bid or offer and the appropriate component months will also be adjusted to reflect the change.

In the case of "in period" strips with expired components, the final settlement price of the expired component will be used in the sum-of-months calculation; components that settled with a decimal component will be rounded to the nearest integer and "halves" will be rounded up.

## Options

The Jewson model for valuing options will be used to establish settlement prices for the options. Trades with caps will be settled at their "uncapped" prices, preserving the differential between strikes.

When a trade occurs in a contract that is "out of period," the appropriate underlying futures settlement and the trade price will be used to determine the implied standard deviation for the trade. This standard deviation will be used to establish all option settlements for this city and expiration going forward until either another option trade occurs and implies a new standard deviation, or the contract period begins.

If no underlying futures settlement is available, the 10-year historical average contract value will be used as the underlying settlement and for the purposes of implied standard deviation calculation.

Once a contract is "in period," whether a monthly option or a seasonal or strip option, the standard deviation will begin to decay. This decay function will form a ratio between the historical standard deviation on the date of the trade, and the historical standard deviation for the remainder of the period on the date the function is run. This ratio will then be multiplied with the implied standard deviation of the trade, and the result will be used to determine the settlement prices for all options in that city and expiration. This decay function will be run as frequently as twice weekly for monthly options that are in period, on Mondays and Wednesdays; for seasonal and strip options it will be run once every two weeks initially with increasing frequency until there is only a month left. CME Group will reserve the right to suspend activation of this decay function when implementing it would motivate a settlement price that is outside of an observed bid or offer.

If multiple option trades occur in a given city and expiration, a linear programming algorithm may be used to determine the appropriate standard deviation and underlying futures settlement that will settle both trades at their respective prices.
